2 Hierarchical Index 3

2.1 Class Hierarchy . . . 3

3 Class Index 7

3.1 Class List . . . 7

4 Module Documentation 11

4.1 HIP API . . . 11

4.1.1 Detailed Description . . . 12

4.1.2 Function Documentation . . . 12

4.1.2.1 hipIpcCloseMemHandle() . . . 12

4.1.2.2 hipIpcGetMemHandle() . . . 12

4.1.2.3 hipIpcOpenMemHandle() . . . 13

4.1.2.4 hipRegisterApiCallback() . . . 13

4.2 Device Management . . . 14

4.2.1 Detailed Description . . . 14

4.2.2 Function Documentation . . . 14

4.2.2.1 hipChooseDevice() . . . 14

4.2.2.2 hipDeviceGetAttribute() . . . 15

4.2.2.3 hipDeviceGetCacheConfig() . . . 15

4.2.2.4 hipDeviceGetLimit() . . . 15

4.2.2.5 hipDeviceGetSharedMemConfig() . . . 16

4.2.2.6 hipDeviceReset() . . . 16

4.2.2.7 hipDeviceSetCacheConfig() . . . 16

4.2.2.8 hipDeviceSetSharedMemConfig() . . . 16

4.2.2.9 hipDeviceSynchronize() . . . 17

4.2.2.10 hipExtGetLinkTypeAndHopCount() . . . 17

4.2.2.11 hipFuncSetAttribute() . . . 17

4.2.2.12 hipFuncSetCacheConfig() . . . 18

4.2.2.13 hipFuncSetSharedMemConfig() . . . 18

4.2.2.14 hipGetDevice() . . . 18

4.2.2.15 hipGetDeviceCount() . . . 20

4.2.2.16 hipGetDeviceFlags() . . . 20

4.2.2.17 hipGetDeviceProperties() . . . 20

4.2.2.18 hipSetDevice() . . . 21

4.2.2.19 hipSetDeviceFlags() . . . 21

4.3 Error Handling . . . 23

4.3.1 Detailed Description . . . 23

4.3.2 Function Documentation . . . 23

4.3.2.1 hipGetErrorName() . . . 23

4.3.2.2 hipGetErrorString() . . . 23
4.3.2.3 hipGetLastError() . . . 24
4.3.2.4 hipPeekAtLastError() . . . 24
4.4 Stream Management . . . 25
4.4.1 Detailed Description . . . 25
4.4.2 Typedef Documentation . . . 25
4.4.2.1 hipStreamCallback_t . . . 25
4.4.3 Function Documentation . . . 25
4.4.3.1 hipDeviceGetStreamPriorityRange() . . . 26
4.4.3.2 hipExtStreamCreateWithCUMask() . . . 26
4.4.3.3 hipStreamAddCallback() . . . 26
4.4.3.4 hipStreamCreate() . . . 28
4.4.3.5 hipStreamCreateWithFlags() . . . 28
4.4.3.6 hipStreamCreateWithPriority() . . . 29
4.4.3.7 hipStreamDestroy() . . . 29
4.4.3.8 hipStreamGetFlags() . . . 30
4.4.3.9 hipStreamGetPriority() . . . 30
4.4.3.10 hipStreamQuery() . . . 31
4.4.3.11 hipStreamSynchronize() . . . 31
4.4.3.12 hipStreamWaitEvent() . . . 31
4.5 Event Management . . . 33
4.5.1 Detailed Description . . . 33
4.5.2 Function Documentation . . . 33
4.5.2.1 hipEventCreate() . . . 33
4.5.2.2 hipEventCreateWithFlags() . . . 33
4.5.2.3 hipEventDestroy() . . . 34
4.5.2.4 hipEventElapsedTime() . . . 34
4.5.2.5 hipEventQuery() . . . 35
4.5.2.6 hipEventRecord() . . . 35
4.5.2.7 hipEventSynchronize() . . . 36
4.6 Memory Management . . . 37
4.6.1 Detailed Description . . . 39
4.6.2 Function Documentation . . . 40
4.6.2.1 hipDrvMemcpy3D() . . . 40
4.6.2.2 hipDrvMemcpy3DAsync() . . . 40
4.6.2.3 hipExtMallocWithFlags() . . . 40
4.6.2.4 hipFree() . . . 41
4.6.2.5 hipFreeArray() . . . 41
4.6.2.6 hipFreeHost() . . . 41
4.6.2.7 hipFreeMipmappedArray() . . . 43
4.6.2.8 hipGetMipmappedArrayLevel() . . . 43
4.6.2.9 hipHostAlloc() . . . 43

4.6.2.10 hipHostFree() . . . 44
4.6.2.11 hipHostGetDevicePointer() . . . 44
4.6.2.12 hipHostGetFlags() . . . 44
4.6.2.13 hipHostMalloc() . . . 45
4.6.2.14 hipHostRegister() . . . 45
4.6.2.15 hipHostUnregister() . . . 46
4.6.2.16 hipMalloc() . . . 46
4.6.2.17 hipMalloc3DArray() . . . 47
4.6.2.18 hipMallocArray() . . . 47
4.6.2.19 hipMallocHost() . . . 48
4.6.2.20 hipMallocManaged() . . . 48
4.6.2.21 hipMallocMipmappedArray() . . . 48
4.6.2.22 hipMallocPitch() . . . 49
4.6.2.23 hipMemAllocHost() . . . 49
4.6.2.24 hipMemAllocPitch() . . . 50
4.6.2.25 hipMemcpy() . . . 50
4.6.2.26 hipMemcpy2D() . . . 51
4.6.2.27 hipMemcpy2DAsync() . . . 51
4.6.2.28 hipMemcpy2DFromArray() . . . 52
4.6.2.29 hipMemcpy2DFromArrayAsync() . . . 53
4.6.2.30 hipMemcpy2DToArray() . . . 53
4.6.2.31 hipMemcpy3D() . . . 55
4.6.2.32 hipMemcpy3DAsync() . . . 55
4.6.2.33 hipMemcpyAsync() . . . 56
4.6.2.34 hipMemcpyAtoH() . . . 57
4.6.2.35 hipMemcpyDtoD() . . . 58
4.6.2.36 hipMemcpyDtoDAsync() . . . 58
4.6.2.37 hipMemcpyDtoH() . . . 59
4.6.2.38 hipMemcpyDtoHAsync() . . . 59
4.6.2.39 hipMemcpyFromArray() . . . 60
4.6.2.40 hipMemcpyHtoA() . . . 60
4.6.2.41 hipMemcpyHtoD() . . . 61
4.6.2.42 hipMemcpyHtoDAsync() . . . 61
4.6.2.43 hipMemcpyParam2D() . . . 62
4.6.2.44 hipMemcpyParam2DAsync() . . . 62
4.6.2.45 hipMemcpyToArray() . . . 63
4.6.2.46 hipMemGetInfo() . . . 63
4.6.2.47 hipMemset() . . . 63
4.6.2.48 hipMemset2D() . . . 64
4.6.2.49 hipMemset2DAsync() . . . 64
4.6.2.50 hipMemset3D() . . . 64
4.6.2.51 hipMemset3DAsync() . . . 65

4.6.2.52 hipMemsetAsync() . . . 65
4.6.2.53 hipMemsetD16() . . . 66
4.6.2.54 hipMemsetD16Async() . . . 66
4.6.2.55 hipMemsetD32() . . . 66
4.6.2.56 hipMemsetD32Async() . . . 67
4.6.2.57 hipMemsetD8() . . . 67
4.6.2.58 hipMemsetD8Async() . . . 68
4.6.2.59 hipPointerGetAttributes() . . . 68
4.7 Device Memory Access . . . 69
4.7.1 Detailed Description . . . 69
4.7.2 Function Documentation . . . 69
4.7.2.1 hipDeviceCanAccessPeer() . . . 69
4.7.2.2 hipDeviceDisablePeerAccess() . . . 70
4.7.2.3 hipDeviceEnablePeerAccess() . . . 70
4.7.2.4 hipMemcpyPeer() . . . 70
4.7.2.5 hipMemcpyPeerAsync() . . . 71
4.7.2.6 hipMemGetAddressRange() . . . 71
4.8 Initialization and Version . . . 73
4.8.1 Detailed Description . . . 74
4.8.2 Function Documentation . . . 74
4.8.2.1 hipDeviceComputeCapability() . . . 74
4.8.2.2 hipDeviceGet() . . . 74
4.8.2.3 hipDeviceGetByPCIBusId() . . . 75
4.8.2.4 hipDeviceGetName() . . . 75
4.8.2.5 hipDeviceGetP2PAttribute() . . . 75
4.8.2.6 hipDeviceGetPCIBusId() . . . 76
4.8.2.7 hipDeviceTotalMem() . . . 76
4.8.2.8 hipDriverGetVersion() . . . 76
4.8.2.9 hipExtLaunchMultiKernelMultiDevice() . . . 77
4.8.2.10 hipFuncGetAttribute() . . . 77
4.8.2.11 hipFuncGetAttributes() . . . 78
4.8.2.12 hipInit() . . . 78
4.8.2.13 hipModuleGetFunction() . . . 78
4.8.2.14 hipModuleGetGlobal() . . . 78
4.8.2.15 hipModuleLaunchKernel() . . . 79
4.8.2.16 hipModuleLoad() . . . 80
4.8.2.17 hipModuleLoadData() . . . 80
4.8.2.18 hipModuleLoadDataEx() . . . 80
4.8.2.19 hipModuleOccupancyMaxActiveBlocksPerMultiprocessor() . . . 81
4.8.2.20 hipModuleOccupancyMaxActiveBlocksPerMultiprocessorWithFlags() . . . 81
4.8.2.21 hipModuleOccupancyMaxPotentialBlockSize() . . . 81
4.8.2.22 hipModuleOccupancyMaxPotentialBlockSizeWithFlags() . . . 82

4.8.2.23 hipModuleUnload() . . . 82
4.8.2.24 hipOccupancyMaxActiveBlocksPerMultiprocessor() . . . 82
4.8.2.25 hipOccupancyMaxActiveBlocksPerMultiprocessorWithFlags() . . . 83
4.8.2.26 hipOccupancyMaxPotentialBlockSize() . . . 83
4.8.2.27 hipRuntimeGetVersion() . . . 84
4.9 Context Management . . . 85
4.9.1 Detailed Description . . . 85
4.9.2 Function Documentation . . . 85
4.9.2.1 hipCtxCreate() . . . 86
4.9.2.2 hipCtxDestroy() . . . 86
4.9.2.3 hipCtxDisablePeerAccess() . . . 86
4.9.2.4 hipCtxEnablePeerAccess() . . . 87
4.9.2.5 hipCtxGetApiVersion() . . . 87
4.9.2.6 hipCtxGetCacheConfig() . . . 88
4.9.2.7 hipCtxGetCurrent() . . . 88
4.9.2.8 hipCtxGetDevice() . . . 89
4.9.2.9 hipCtxGetFlags() . . . 89
4.9.2.10 hipCtxGetSharedMemConfig() . . . 89
4.9.2.11 hipCtxPopCurrent() . . . 90
4.9.2.12 hipCtxPushCurrent() . . . 90
4.9.2.13 hipCtxSetCacheConfig() . . . 90
4.9.2.14 hipCtxSetCurrent() . . . 91
4.9.2.15 hipCtxSetSharedMemConfig() . . . 91
4.9.2.16 hipCtxSynchronize() . . . 92
4.9.2.17 hipDevicePrimaryCtxGetState() . . . 92
4.9.2.18 hipDevicePrimaryCtxRelease() . . . 92
4.9.2.19 hipDevicePrimaryCtxReset() . . . 93
4.9.2.20 hipDevicePrimaryCtxRetain() . . . 93
4.9.2.21 hipDevicePrimaryCtxSetFlags() . . . 94
4.10 Control . . . 95
4.10.1 Detailed Description . . . 95
4.10.2 Function Documentation . . . 95
4.10.2.1 hipProfilerStart() . . . 95
4.10.2.2 hipProfilerStop() . . . 95
4.11 Launch API to support the triple-chevron syntax . . . 96
4.11.1 Detailed Description . . . 97
4.11.2 Function Documentation . . . 97
4.11.2.1 __hipPopCallConfiguration() . . . 98
4.11.2.2 __hipPushCallConfiguration() . . . 98
4.11.2.3 hipConfigureCall() . . . 98
4.11.2.4 hipLaunchByPtr() . . . 99
4.11.2.5 hipLaunchKernel() . . . 99

4.11.2.6 hipMemAdvise() . . . 100
4.11.2.7 hipMemPrefetchAsync() . . . 100
4.11.2.8 hipMemRangeGetAttribute() . . . 100
4.11.2.9 hipMemRangeGetAttributes() . . . 101
4.11.2.10 hipSetupArgument() . . . 101
4.11.2.11 hipStreamAttachMemAsync() . . . 102
4.12 Global enum and defines . . . 103
4.12.1 Detailed Description . . . 105
4.12.2 Macro Definition Documentation . . . 105
4.12.2.1 hipDeviceScheduleSpin . . . 105
4.12.2.2 hipDeviceScheduleYield . . . 105
4.12.2.3 hipEventDefault . . . 106
4.12.2.4 hipEventInterprocess . . . 106
4.12.2.5 hipEventReleaseToSystem . . . 106
4.12.2.6 hipHostMallocCoherent . . . 106
4.12.2.7 hipHostMallocDefault . . . 106
4.12.2.8 hipHostMallocMapped . . . 106
4.12.2.9 hipHostMallocNonCoherent . . . 106
4.12.2.10 hipHostRegisterDefault . . . 106
4.12.2.11 hipHostRegisterMapped . . . 106
4.12.2.12 hipMemAttachSingle . . . 107
4.12.2.13 hipStreamDefault . . . 107
4.12.3 Typedef Documentation . . . 107
4.12.3.1 dim3 . . . 107
4.12.3.2 hipFuncAttribute . . . 107
4.12.3.3 hipFuncCache_t . . . 107
4.12.3.4 hipSharedMemConfig . . . 107
4.12.4 Enumeration Type Documentation . . . 107
4.12.4.1 hipDeviceAttribute_t . . . 107
4.12.4.2 hipFuncAttribute . . . 109
4.12.4.3 hipFuncCache_t . . . 109
4.12.4.4 hipMemoryAdvise . . . 110
4.12.4.5 hipMemRangeAttribute . . . 110
4.12.4.6 hipSharedMemConfig . . . 110

5 Class Documentation **111**

5.1 __half2_raw Struct Reference . . . 111
5.2 __half_raw Struct Reference . . . 111
5.3 __hip_enable_if< __B, __T > Struct Template Reference . . . 111
5.4 __hip_enable_if< true, __T > Struct Template Reference . . . 111
5.5 char1 Union Reference . . . 111
5.6 char16 Union Reference . . . 111

5.7 char2 Union Reference . . . 111
5.8 char3 Union Reference . . . 112
5.9 char4 Union Reference . . . 112
5.10 char8 Union Reference . . . 112
5.11 dim3 Struct Reference . . . 112
5.11.1 Detailed Description . . . 112
5.12 double1 Union Reference . . . 112
5.13 double16 Union Reference . . . 112
5.14 double2 Union Reference . . . 112
5.15 double3 Union Reference . . . 113
5.16 double4 Union Reference . . . 113
5.17 double8 Union Reference . . . 113
5.18 ELFIO::dump Class Reference . . . 113
5.19 ELFIO::dynamic_section_accessor Class Reference . . . 113
5.20 ELFIO::Elf32_Dyn Struct Reference . . . 114
5.21 ELFIO::Elf32_Ehdr Struct Reference . . . 114
5.22 ELFIO::Elf32_Phdr Struct Reference . . . 114
5.23 ELFIO::Elf32_Rel Struct Reference . . . 114
5.24 ELFIO::Elf32_Rela Struct Reference . . . 115
5.25 ELFIO::Elf32_Shdr Struct Reference . . . 115
5.26 ELFIO::Elf32_Sym Struct Reference . . . 115
5.27 ELFIO::Elf64_Dyn Struct Reference . . . 115
5.28 ELFIO::Elf64_Ehdr Struct Reference . . . 115
5.29 ELFIO::Elf64_Phdr Struct Reference . . . 116
5.30 ELFIO::Elf64_Rel Struct Reference . . . 116
5.31 ELFIO::Elf64_Rela Struct Reference . . . 116
5.32 ELFIO::Elf64_Shdr Struct Reference . . . 116
5.33 ELFIO::Elf64_Sym Struct Reference . . . 117
5.34 ELFIO::elf_header Class Reference . . . 117
5.35 ELFIO::elf_header_impl< T > Class Template Reference . . . 117
5.36 ELFIO::elf_header_impl_types< T > Struct Template Reference . . . 118
5.37 ELFIO::elf_header_impl_types< Elf32_Ehdr > Struct Reference . . . 118
5.38 ELFIO::elf_header_impl_types< Elf64_Ehdr > Struct Reference . . . 118
5.39 ELFIO::elfio Class Reference . . . 118
5.40 ELFIO::endianess_convertor Class Reference . . . 119
5.41 float1 Union Reference . . . 119
5.42 float16 Union Reference . . . 120
5.43 float2 Union Reference . . . 120
5.44 float3 Union Reference . . . 120
5.45 float4 Union Reference . . . 120
5.46 float8 Union Reference . . . 120
5.47 ELFIO::get_sym_and_type< T > Struct Template Reference . . . 120

5.48 ELFIO::get_sym_and_type< Elf32_Rel > Struct Reference . . . 120
5.49 ELFIO::get_sym_and_type< Elf32_Rela > Struct Reference . . . 120
5.50 ELFIO::get_sym_and_type< Elf64_Rel > Struct Reference . . . 120
5.51 ELFIO::get_sym_and_type< Elf64_Rela > Struct Reference . . . 121
5.52 gl_dim3 Struct Reference . . . 121
5.53 grid_launch_parm Struct Reference . . . 121
5.53.1 Member Data Documentation . . . 121
5.53.1.1 av . . . 121
5.53.1.2 barrier_bit . . . 121
5.53.1.3 cf . . . 122
5.53.1.4 dynamic_group_mem_bytes . . . 122
5.53.1.5 launch_fence . . . 122
5.54 grid_launch_parm_cxx Class Reference . . . 122
5.55 HIP_ARRAY3D_DESCRIPTOR Struct Reference . . . 122
5.56 HIP_ARRAY_DESCRIPTOR Struct Reference . . . 122
5.57 hip_bfloat16 Struct Reference . . . 123
5.57.1 Detailed Description . . . 123
5.58 hip_Memcpy2D Struct Reference . . . 123
5.59 HIP_MEMCPY3D Struct Reference . . . 123
5.60 HIP_RESOURCE_DESC_st Struct Reference . . . 124
5.60.1 Member Data Documentation . . . 124
5.60.1.1 devPtr . . . 124

Module Documentation

4.1 HIP API

Modules

- Device Management
- Error Handling
- Stream Management
- Event Management
- Memory Management
- Device Memory Access
- Initialization and Version
- Context Management
- Control
- Launch API to support the triple-chevron syntax

Functions

- hipError_t hipIpcGetMemHandle (hipIpcMemHandle_t *handle, void *devPtr)

  Gets an interprocess memory handle for an existing device memory allocation.
- hipError_t hipIpcOpenMemHandle (void **devPtr, hipIpcMemHandle_t handle, unsigned int flags)

  Opens an interprocess memory handle exported from another process and returns a device pointer usable in the local process.
- hipError_t hipIpcCloseMemHandle (void *devPtr)

  Close memory mapped with hipIpcOpenMemHandle.
- hipError_t **hipIpcGetEventHandle** (hipIpcEventHandle_t *handle, hipEvent_t event)
- hipError_t **hipIpcOpenEventHandle** (hipEvent_t *event, hipIpcEventHandle_t handle)
- hipError_t hipRegisterApiCallback (uint32_t id, void *fun, void *arg)
- hipError_t **hipRemoveApiCallback** (uint32_t id)
- hipError_t **hipRegisterActivityCallback** (uint32_t id, void *fun, void *arg)
- hipError_t **hipRemoveActivityCallback** (uint32_t id)
- const char * **hipApiName** (uint32_t id)
- const char * **hipKernelNameRef** (const hipFunction_t f)
- const char * **hipKernelNameRefByPtr** (const void *hostFunction, hipStream_t stream)
- int **hipGetStreamDeviceId** (hipStream_t stream)

4.1.1 Detailed Description

Defines the HIP API. See the individual sections for more information.

4.1.2 Function Documentation

4.1.2.1 hipIpcCloseMemHandle()

```
hipError_t hipIpcCloseMemHandle (
             void * devPtr )
```

Close memory mapped with hipIpcOpenMemHandle.

Unmaps memory returnd by hipIpcOpenMemHandle. The original allocation in the exporting process as well as imported mappings in other processes will be unaffected.

Any resources used to enable peer access will be freed if this is the last mapping using them.

Parameters

devPtr	- Device pointer returned by hipIpcOpenMemHandle

Returns

hipSuccess, hipErrorMapFailed, hipErrorInvalidHandle,

4.1.2.2 hipIpcGetMemHandle()

```
hipError_t hipIpcGetMemHandle (
             hipIpcMemHandle_t * handle,
             void * devPtr )
```

Gets an interprocess memory handle for an existing device memory allocation.

Takes a pointer to the base of an existing device memory allocation created with hipMalloc and exports it for use in another process. This is a lightweight operation and may be called multiple times on an allocation without adverse effects.

If a region of memory is freed with hipFree and a subsequent call to hipMalloc returns memory with the same device address, hipIpcGetMemHandle will return a unique handle for the new memory.

Parameters

handle	- Pointer to user allocated hipIpcMemHandle to return the handle in.
devPtr	- Base pointer to previously allocated device memory

Returns

hipSuccess, hipErrorInvalidHandle, hipErrorOutOfMemory, hipErrorMapFailed,

4.1.2.3 hipIpcOpenMemHandle()

```
hipError_t hipIpcOpenMemHandle (
             void ** devPtr,
             hipIpcMemHandle_t handle,
             unsigned int flags )
```

Opens an interprocess memory handle exported from another process and returns a device pointer usable in the local process.

Maps memory exported from another process with hipIpcGetMemHandle into the current device address space. For contexts on different devices hipIpcOpenMemHandle can attempt to enable peer access between the devices as if the user called hipDeviceEnablePeerAccess. This behavior is controlled by the hipIpcMemLazyEnablePeerAccess flag. hipDeviceCanAccessPeer can determine if a mapping is possible.

Contexts that may open hipIpcMemHandles are restricted in the following way. hipIpcMemHandles from each device in a given process may only be opened by one context per device per other process.

Memory returned from hipIpcOpenMemHandle must be freed with hipIpcCloseMemHandle.

Calling hipFree on an exported memory region before calling hipIpcCloseMemHandle in the importing context will result in undefined behavior.

Parameters

devPtr	- Returned device pointer
handle	- hipIpcMemHandle to open
flags	- Flags for this operation. Must be specified as hipIpcMemLazyEnablePeerAccess

Returns

hipSuccess, hipErrorMapFailed, hipErrorInvalidHandle, hipErrorTooManyPeers

Note

No guarantees are made about the address returned in `*devPtr`. In particular, multiple processes may not receive the same address for the same `handle`.

4.1.2.4 hipRegisterApiCallback()

```
hipError_t hipRegisterApiCallback (
             uint32_t id,
             void * fun,
             void * arg )
```

Callback/Activity API

4.2 Device Management

Functions

- hipError_t hipDeviceSynchronize (void)

  Waits on all active streams on current device.
- hipError_t hipDeviceReset (void)

  The state of current device is discarded and updated to a fresh state.
- hipError_t hipSetDevice (int deviceId)

  Set default device to be used for subsequent hip API calls from this thread.
- hipError_t hipGetDevice (int ∗deviceId)

  Return the default device id for the calling host thread.
- hipError_t hipGetDeviceCount (int ∗count)

  Return number of compute-capable devices.
- hipError_t hipDeviceGetAttribute (int ∗pi, hipDeviceAttribute_t attr, int deviceId)

  Query for a specific device attribute.
- hipError_t hipGetDeviceProperties (hipDeviceProp_t ∗prop, int deviceId)

  Returns device properties.
- hipError_t hipDeviceSetCacheConfig (hipFuncCache_t cacheConfig)

  Set L1/Shared cache partition.
- hipError_t hipDeviceGetCacheConfig (hipFuncCache_t ∗cacheConfig)

  Set Cache configuration for a specific function.
- hipError_t hipDeviceGetLimit (size_t ∗pValue, enum hipLimit_t limit)

  Get Resource limits of current device.
- hipError_t hipFuncSetAttribute (const void ∗func, hipFuncAttribute attr, int value)

  Set attribute for a specific function.
- hipError_t hipFuncSetCacheConfig (const void ∗func, hipFuncCache_t config)

  Set Cache configuration for a specific function.
- hipError_t hipFuncSetSharedMemConfig (const void ∗func, hipSharedMemConfig config)

  Set shared memory configuation for a specific function.
- hipError_t hipDeviceGetSharedMemConfig (hipSharedMemConfig ∗pConfig)

  Returns bank width of shared memory for current device.
- hipError_t hipGetDeviceFlags (unsigned int ∗flags)

  Gets the flags set for current device.
- hipError_t hipDeviceSetSharedMemConfig (hipSharedMemConfig config)

  The bank width of shared memory on current device is set.
- hipError_t hipSetDeviceFlags (unsigned flags)

  The current device behavior is changed according the flags passed.
- hipError_t hipChooseDevice (int ∗device, const hipDeviceProp_t ∗prop)

  Device which matches hipDeviceProp_t is returned.
- hipError_t hipExtGetLinkTypeAndHopCount (int device1, int device2, uint32_t ∗linktype, uint32_t ∗hopcount)

  Returns the link type and hop count between two devices.

4.2.1 Detailed Description

4.2.2 Function Documentation

4.2.2.1 hipChooseDevice()

```
hipError_t hipChooseDevice (
            int * device,
            const hipDeviceProp_t * prop )
```

Device which matches hipDeviceProp_t is returned.

Parameters

out	*device*	ID
in	*device*	properties pointer

Returns

#hipSuccess, #hipErrorInvalidValue

4.2.2.2 hipDeviceGetAttribute()

```
hipError_t hipDeviceGetAttribute (
            int * pi,
            hipDeviceAttribute_t attr,
            int deviceId )
```

Query for a specific device attribute.

Parameters

out	*pi*	pointer to value to return
in	*attr*	attribute to query
in	*deviceId*	which device to query for information

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue

4.2.2.3 hipDeviceGetCacheConfig()

```
hipError_t hipDeviceGetCacheConfig (
            hipFuncCache_t * cacheConfig )
```

Set Cache configuration for a specific function.

Parameters

in	*cacheConfig*	

Returns

#hipSuccess, #hipErrorNotInitialized Note: AMD devices and some Nvidia GPUS do not support reconfigurable cache. This hint is ignored on those architectures.

4.2.2.4 hipDeviceGetLimit()

```
hipError_t hipDeviceGetLimit (
            size_t * pValue,
            enum hipLimit_t limit )
```

Get Resource limits of current device.

Parameters

out	*pValue*	
in	*limit*	

Returns

#hipSuccess, #hipErrorUnsupportedLimit, #hipErrorInvalidValue Note: Currently, only hipLimitMallocHeap↩ Size is available

4.2.2.5 hipDeviceGetSharedMemConfig()

```
hipError_t hipDeviceGetSharedMemConfig (
            hipSharedMemConfig * pConfig )
```

Returns bank width of shared memory for current device.

Parameters

out	*pConfig*	

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

Note: AMD devices and some Nvidia GPUS do not support shared cache banking, and the hint is ignored on those architectures.

4.2.2.6 hipDeviceReset()

```
hipError_t hipDeviceReset (
            void  )
```

The state of current device is discarded and updated to a fresh state.
Calling this function deletes all streams created, memory allocated, kernels running, events created. Make sure that no other thread is using the device or streams, memory, kernels, events associated with the current device.

Returns

#hipSuccess

See also

hipDeviceSynchronize

4.2.2.7 hipDeviceSetCacheConfig()

```
hipError_t hipDeviceSetCacheConfig (
            hipFuncCache_t cacheConfig )
```

Set L1/Shared cache partition.

Parameters

in	*cacheConfig*	

Returns

#hipSuccess, #hipErrorNotInitialized Note: AMD devices and some Nvidia GPUS do not support reconfigurable cache. This hint is ignored on those architectures.

4.2.2.8 hipDeviceSetSharedMemConfig()

```
hipError_t hipDeviceSetSharedMemConfig (
```

```
            hipSharedMemConfig config )
```

The bank width of shared memory on current device is set.

Parameters

in	*config*	

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

Note: AMD devices and some Nvidia GPUS do not support shared cache banking, and the hint is ignored on those architectures.

4.2.2.9 hipDeviceSynchronize()

```
hipError_t hipDeviceSynchronize (
            void  )
```

Waits on all active streams on current device.
When this command is invoked, the host thread gets blocked until all the commands associated with streams associated with the device. HIP does not support multiple blocking modes (yet!).

Returns

#hipSuccess

See also

hipSetDevice, hipDeviceReset

4.2.2.10 hipExtGetLinkTypeAndHopCount()

```
hipError_t hipExtGetLinkTypeAndHopCount (
            int device1,
            int device2,
            uint32_t * linktype,
            uint32_t * hopcount )
```

Returns the link type and hop count between two devices.

Parameters

in	*device1*	Ordinal for device1
in	*device2*	Ordinal for device2
out	*linktype*	Returns the link type (See hsa_amd_link_info_type_t) between the two devices
out	*hopcount*	Returns the hop count between the two devices

Queries and returns the HSA link type and the hop count between the two specified devices.

Returns

#hipSuccess, #hipInvalidDevice, #hipErrorRuntimeOther

4.2.2.11 hipFuncSetAttribute()

```
hipError_t hipFuncSetAttribute (
            const void * func,
```

```
            hipFuncAttribute attr,
            int value )
```

Set attribute for a specific function.

Parameters

in	*func;*	
in	*attr;*	
in	*value;*	

Returns

#hipSuccess, #hipErrorInvalidDeviceFunction, #hipErrorInvalidValue

Note: AMD devices and some Nvidia GPUS do not support shared cache banking, and the hint is ignored on those architectures.

4.2.2.12 hipFuncSetCacheConfig()

```
hipError_t hipFuncSetCacheConfig (
            const void * func,
            hipFuncCache_t config )
```

Set Cache configuration for a specific function.

Parameters

in	*config;*	

Returns

#hipSuccess, #hipErrorNotInitialized Note: AMD devices and some Nvidia GPUS do not support reconfigurable cache. This hint is ignored on those architectures.

4.2.2.13 hipFuncSetSharedMemConfig()

```
hipError_t hipFuncSetSharedMemConfig (
            const void * func,
            hipSharedMemConfig config )
```

Set shared memory configuation for a specific function.

Parameters

in	*func*	
in	*config*	

Returns

#hipSuccess, #hipErrorInvalidDeviceFunction, #hipErrorInvalidValue

Note: AMD devices and some Nvidia GPUS do not support shared cache banking, and the hint is ignored on those architectures.

4.2.2.14 hipGetDevice()

```
hipError_t hipGetDevice (
            int * deviceId )
```

Return the default device id for the calling host thread.

Parameters

out	*device*	*device is written with the default device

HIP maintains an default device for each thread using thread-local-storage. This device is used implicitly for HIP runtime APIs called by this thread. hipGetDevice returns in * device the default device for the calling host thread.

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue

See also

hipSetDevice, hipGetDevicesizeBytes

4.2.2.15 hipGetDeviceCount()

```
hipError_t hipGetDeviceCount (
            int * count )
```

Return number of compute-capable devices.

Parameters

[output]	count Returns number of compute-capable devices.

Returns

#hipSuccess, #hipErrorNoDevice

Returns in *count the number of devices that have ability to run compute commands. If there are no such devices, then hipGetDeviceCount will return #hipErrorNoDevice. If 1 or more devices can be found, then hipGetDeviceCount returns #hipSuccess.

4.2.2.16 hipGetDeviceFlags()

```
hipError_t hipGetDeviceFlags (
            unsigned int * flags )
```

Gets the flags set for current device.

Parameters

out	*flags*	

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue

4.2.2.17 hipGetDeviceProperties()

```
hipError_t hipGetDeviceProperties (
            hipDeviceProp_t * prop,
            int deviceId )
```

Returns device properties.

Parameters

out	*prop*	written with device properties
in	*device↩ Id*	which device to query for information

Returns

#hipSuccess, #hipErrorInvalidDevice

Populates hipGetDeviceProperties with information for the specified device.

4.2.2.18 hipSetDevice()

```
hipError_t hipSetDevice (
            int deviceId )
```

Set default device to be used for subsequent hip API calls from this thread.

Parameters

in	*device↩ Id*	Valid device in range 0...hipGetDeviceCount().

Sets `device` as the default device for the calling host thread. Valid device id's are 0... (hipGetDeviceCount()-1). Many HIP APIs implicitly use the "default device" :

- Any device memory subsequently allocated from this host thread (using hipMalloc) will be allocated on device.
- Any streams or events created from this host thread will be associated with device.
- Any kernels launched from this host thread (using hipLaunchKernel) will be executed on device (unless a specific stream is specified, in which case the device associated with that stream will be used).

This function may be called from any host thread. Multiple host threads may use the same device. This function does no synchronization with the previous or new device, and has very little runtime overhead. Applications can use hipSetDevice to quickly switch the default device before making a HIP runtime call which uses the default device. The default device is stored in thread-local-storage for each thread. Thread-pool implementations may inherit the default device of the previous thread. A good practice is to always call hipSetDevice at the start of HIP coding sequency to establish a known standard device.

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorDeviceAlreadyInUse

See also

hipGetDevice, hipGetDeviceCount

4.2.2.19 hipSetDeviceFlags()

```
hipError_t hipSetDeviceFlags (
            unsigned flags )
```

The current device behavior is changed according the flags passed.

Parameters

in	*flags*	The schedule flags impact how HIP waits for the completion of a command running on a device. hipDeviceScheduleSpin : HIP runtime will actively spin in the thread which submitted the work until the command completes. This offers the lowest latency, but will consume a CPU core and may increase power. hipDeviceScheduleYield : The HIP runtime will yield the CPU to system so that other tasks can use it. This may increase latency to detect the completion but will consume less power and is friendlier to other tasks in the system. hipDeviceScheduleBlockingSync : On ROCm platform, this is a synonym for hipDeviceScheduleYield. hipDeviceScheduleAuto : Use a hueristic to select between Spin and Yield modes. If the number of HIP contexts is greater than the number of logical processors in the system, use Spin scheduling. Else use Yield scheduling.

hipDeviceMapHost : Allow mapping host memory. On ROCM, this is always allowed and the flag is ignored. hip↩ DeviceLmemResizeToMax :

Warning

ROCm silently ignores this flag.

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorSetOnActiveProcess

4.3 Error Handling

Functions

- hipError_t hipGetLastError (void)

  Return last error returned by any HIP runtime API call and resets the stored error code to #hipSuccess.
- hipError_t hipPeekAtLastError (void)

  Return last error returned by any HIP runtime API call.
- const char * hipGetErrorName (hipError_t hip_error)

  Return name of the specified error code in text form.
- const char * hipGetErrorString (hipError_t hipError)

  Return handy text string message to explain the error which occurred.

4.3.1 Detailed Description

4.3.2 Function Documentation

4.3.2.1 hipGetErrorName()

```
const char* hipGetErrorName (
            hipError_t hip_error )
```

Return name of the specified error code in text form.

Parameters

hip_error	Error code to convert to name.

Returns

const char pointer to the NULL-terminated error name

See also

hipGetErrorString, hipGetLastError, hipPeakAtLastError, hipError_t

4.3.2.2 hipGetErrorString()

```
const char* hipGetErrorString (
            hipError_t hipError )
```

Return handy text string message to explain the error which occurred.

Parameters

hipError	Error code to convert to string.

Returns

const char pointer to the NULL-terminated error string

Warning

: on HCC, this function returns the name of the error (same as hipGetErrorName)

See also

hipGetErrorName, hipGetLastError, hipPeakAtLastError, hipError_t

4.3.2.3 hipGetLastError()

```
hipError_t hipGetLastError (
            void  )
```

Return last error returned by any HIP runtime API call and resets the stored error code to #hipSuccess.

Returns

return code from last HIP called from the active host thread

Returns the last error that has been returned by any of the runtime calls in the same host thread, and then resets the saved error to #hipSuccess.

See also

hipGetErrorString, hipGetLastError, hipPeakAtLastError, hipError_t

4.3.2.4 hipPeekAtLastError()

```
hipError_t hipPeekAtLastError (
            void  )
```

Return last error returned by any HIP runtime API call.

Returns

#hipSuccess

Returns the last error that has been returned by any of the runtime calls in the same host thread. Unlike hipGet↩ LastError, this function does not reset the saved error code.

See also

hipGetErrorString, hipGetLastError, hipPeakAtLastError, hipError_t

4.4 Stream Management

Typedefs

- typedef void(∗ hipStreamCallback_t) (hipStream_t stream, hipError_t status, void ∗userData)

Functions

- hipError_t hipStreamCreate (hipStream_t ∗stream)

  Create an asynchronous stream.
- hipError_t hipStreamCreateWithFlags (hipStream_t ∗stream, unsigned int flags)

  Create an asynchronous stream.
- hipError_t hipStreamCreateWithPriority (hipStream_t ∗stream, unsigned int flags, int priority)

  Create an asynchronous stream with the specified priority.
- hipError_t hipDeviceGetStreamPriorityRange (int ∗leastPriority, int ∗greatestPriority)

  Returns numerical values that correspond to the least and greatest stream priority.
- hipError_t hipStreamDestroy (hipStream_t stream)

  Destroys the specified stream.
- hipError_t hipStreamQuery (hipStream_t stream)

  Return #hipSuccess if all of the operations in the specified `stream` have completed, or #hipErrorNotReady if not.
- hipError_t hipStreamSynchronize (hipStream_t stream)

  Wait for all commands in stream to complete.
- hipError_t hipStreamWaitEvent (hipStream_t stream, hipEvent_t event, unsigned int flags)

  Make the specified compute stream wait for an event.
- hipError_t hipStreamGetFlags (hipStream_t stream, unsigned int ∗flags)

  Return flags associated with this stream.
- hipError_t hipStreamGetPriority (hipStream_t stream, int ∗priority)

  Query the priority of a stream.
- hipError_t hipExtStreamCreateWithCUMask (hipStream_t ∗stream, uint32_t cuMaskSize, const uint32_t ∗cuMask)

  Create an asynchronous stream with the specified CU mask.
- hipError_t hipStreamAddCallback (hipStream_t stream, hipStreamCallback_t callback, void ∗userData, unsigned int flags)

  Adds a callback to be called on the host after all currently enqueued items in the stream have completed. For each cudaStreamAddCallback call, a callback will be executed exactly once. The callback will block later work in the stream until it is finished.

4.4.1 Detailed Description

The following Stream APIs are not (yet) supported in HIP:

- cudaStreamAttachMemAsync

4.4.2 Typedef Documentation

4.4.2.1 hipStreamCallback_t

```
typedef void(* hipStreamCallback_t) (hipStream_t stream, hipError_t status, void *userData)
```

Stream CallBack struct

4.4.3 Function Documentation

4.4.3.1 hipDeviceGetStreamPriorityRange()

```
hipError_t hipDeviceGetStreamPriorityRange (
            int * leastPriority,
            int * greatestPriority )
```

Returns numerical values that correspond to the least and greatest stream priority.

Parameters

in,out	*leastPriority*	pointer in which value corresponding to least priority is returned.
in,out	*greatestPriority*	pointer in which value corresponding to greatest priority is returned.

Returns in ∗leastPriority and ∗greatestPriority the numerical values that correspond to the least and greatest stream priority respectively. Stream priorities follow a convention where lower numbers imply greater priorities. The range of meaningful stream priorities is given by [∗greatestPriority, ∗leastPriority]. If the user attempts to create a stream with a priority value that is outside the the meaningful range as specified by this API, the priority is automatically clamped to within the valid range.

4.4.3.2 hipExtStreamCreateWithCUMask()

```
hipError_t hipExtStreamCreateWithCUMask (
            hipStream_t * stream,
            uint32_t cuMaskSize,
            const uint32_t * cuMask )
```

Create an asynchronous stream with the specified CU mask.

Parameters

in,out	*stream*	Pointer to new stream
in	*cuMaskSize*	Size of CU mask bit array passed in.
in	*cuMask*	Bit-vector representing the CU mask. Each active bit represents using one CU. The first 32 bits represent the first 32 CUs, and so on. If its size is greater than physical CU number (i.e., multiProcessorCount member of hipDeviceProp_t), the extra elements are ignored. It is user's responsibility to make sure the input is meaningful.

Returns

#hipSuccess, #hipErrorInvalidHandle, #hipErrorInvalidValue

Create a new asynchronous stream with the specified CU mask. stream returns an opaque handle that can be used to reference the newly created stream in subsequent hipStream∗ commands. The stream is allocated on the heap and will remain allocated even if the handle goes out-of-scope. To release the memory used by the stream, application must call hipStreamDestroy.

See also

hipStreamCreate, hipStreamSynchronize, hipStreamWaitEvent, hipStreamDestroy

4.4.3.3 hipStreamAddCallback()

```
hipError_t hipStreamAddCallback (
            hipStream_t stream,
            hipStreamCallback_t callback,
            void * userData,
            unsigned int flags )
```

Adds a callback to be called on the host after all currently enqueued items in the stream have completed. For each cudaStreamAddCallback call, a callback will be executed exactly once. The callback will block later work in the stream until it is finished.

Parameters

in	*stream*	- Stream to add callback to
in	*callback*	- The function to call once preceding stream operations are complete
in	*userData*	- User specified data to be passed to the callback function
in	*flags*	- Reserved for future use, must be 0

Returns

#hipSuccess, #hipErrorInvalidHandle, #hipErrorNotSupported

See also

hipStreamCreate, hipStreamCreateWithFlags, hipStreamQuery, hipStreamSynchronize, hipStreamWaitEvent, hipStreamDestroy, hipStreamCreateWithPriority

4.4.3.4 hipStreamCreate()

```
hipError_t hipStreamCreate (
            hipStream_t * stream )
```

Create an asynchronous stream.

Parameters

in,out	*stream*	Valid pointer to hipStream_t. This function writes the memory with the newly created stream.

Returns

#hipSuccess, #hipErrorInvalidValue

Create a new asynchronous stream. `stream` returns an opaque handle that can be used to reference the newly created stream in subsequent hipStream∗ commands. The stream is allocated on the heap and will remain allocated even if the handle goes out-of-scope. To release the memory used by the stream, applicaiton must call hipStream↩ Destroy.

Returns

#hipSuccess, #hipErrorInvalidValue

See also

hipStreamCreateWithFlags, hipStreamCreateWithPriority, hipStreamSynchronize, hipStreamWaitEvent, hipStreamDestroy

4.4.3.5 hipStreamCreateWithFlags()

```
hipError_t hipStreamCreateWithFlags (
            hipStream_t * stream,
            unsigned int flags )
```

Create an asynchronous stream.

Parameters

in,out	*stream*	Pointer to new stream
in	*flags*	to control stream creation.

Returns

#hipSuccess, #hipErrorInvalidValue

Create a new asynchronous stream. `stream` returns an opaque handle that can be used to reference the newly created stream in subsequent hipStream∗ commands. The stream is allocated on the heap and will remain allocated even if the handle goes out-of-scope. To release the memory used by the stream, applicaiton must call hipStream↩ Destroy. Flags controls behavior of the stream. See hipStreamDefault, hipStreamNonBlocking.

See also

hipStreamCreate, hipStreamCreateWithPriority, hipStreamSynchronize, hipStreamWaitEvent, hipStreamDestroy

4.4.3.6 hipStreamCreateWithPriority()

```
hipError_t hipStreamCreateWithPriority (
            hipStream_t * stream,
            unsigned int flags,
            int priority )
```

Create an asynchronous stream with the specified priority.

Parameters

in,out	*stream*	Pointer to new stream
in	*flags*	to control stream creation.
in	*priority*	of the stream. Lower numbers represent higher priorities.

Returns

#hipSuccess, #hipErrorInvalidValue

Create a new asynchronous stream with the specified priority. `stream` returns an opaque handle that can be used to reference the newly created stream in subsequent hipStream∗ commands. The stream is allocated on the heap and will remain allocated even if the handle goes out-of-scope. To release the memory used by the stream, applicaiton must call hipStreamDestroy. Flags controls behavior of the stream. See hipStreamDefault, hipStreamNonBlocking.

See also

hipStreamCreate, hipStreamSynchronize, hipStreamWaitEvent, hipStreamDestroy

4.4.3.7 hipStreamDestroy()

```
hipError_t hipStreamDestroy (
            hipStream_t stream )
```

Destroys the specified stream.

Parameters

in,out	*stream*	Valid pointer to hipStream_t. This function writes the memory with the newly created stream.

Returns

#hipSuccess #hipErrorInvalidHandle

Destroys the specified stream.
If commands are still executing on the specified stream, some may complete execution before the queue is deleted.

The queue may be destroyed while some commands are still inflight, or may wait for all commands queued to the stream before destroying it.

See also

hipStreamCreate, hipStreamCreateWithFlags, hipStreamCreateWithPriority, hipStreamQuery, hipStreamWaitEvent, hipStreamSynchronize

4.4.3.8 hipStreamGetFlags()

```
hipError_t hipStreamGetFlags (
            hipStream_t stream,
            unsigned int * flags )
```

Return flags associated with this stream.

Parameters

in	*stream*	stream to be queried
in,out	*flags*	Pointer to an unsigned integer in which the stream's flags are returned

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidHandle

#hipSuccess #hipErrorInvalidValue #hipErrorInvalidHandle

Return flags associated with this stream in `*flags`.

See also

hipStreamCreateWithFlags

4.4.3.9 hipStreamGetPriority()

```
hipError_t hipStreamGetPriority (
            hipStream_t stream,
            int * priority )
```

Query the priority of a stream.

Parameters

in	*stream*	stream to be queried
in,out	*priority*	Pointer to an unsigned integer in which the stream's priority is returned

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidHandle

#hipSuccess #hipErrorInvalidValue #hipErrorInvalidHandle

Query the priority of a stream. The priority is returned in in priority.

See also

hipStreamCreateWithFlags

4.4.3.10 hipStreamQuery()

```
hipError_t hipStreamQuery (
            hipStream_t stream )
```

Return #hipSuccess if all of the operations in the specified `stream` have completed, or #hipErrorNotReady if not.

Parameters

in	*stream*	stream to query

Returns

#hipSuccess, #hipErrorNotReady, #hipErrorInvalidHandle

This is thread-safe and returns a snapshot of the current state of the queue. However, if other host threads are sending work to the stream, the status may change immediately after the function is called. It is typically used for debug.

See also

hipStreamCreate, hipStreamCreateWithFlags, hipStreamCreateWithPriority, hipStreamWaitEvent, hipStreamSynchronize, hipStreamDestroy

4.4.3.11 hipStreamSynchronize()

```
hipError_t hipStreamSynchronize (
            hipStream_t stream )
```

Wait for all commands in stream to complete.

Parameters

in	*stream*	stream identifier.

Returns

#hipSuccess, #hipErrorInvalidHandle

This command is host-synchronous : the host will block until the specified stream is empty.
This command follows standard null-stream semantics. Specifically, specifying the null stream will cause the command to wait for other streams on the same device to complete all pending operations.
This command honors the hipDeviceLaunchBlocking flag, which controls whether the wait is active or blocking.

See also

hipStreamCreate, hipStreamCreateWithFlags, hipStreamCreateWithPriority, hipStreamWaitEvent, hipStreamDestroy

4.4.3.12 hipStreamWaitEvent()

```
hipError_t hipStreamWaitEvent (
            hipStream_t stream,
            hipEvent_t event,
            unsigned int flags )
```

Make the specified compute stream wait for an event.

Parameters

in	*stream*	stream to make wait.
in	*event*	event to wait on
in	*flags*	control operation [must be 0]

Returns

#hipSuccess, #hipErrorInvalidHandle

This function inserts a wait operation into the specified stream. All future work submitted to `stream` will wait until `event` reports completion before beginning execution.
This function only waits for commands in the current stream to complete. Notably,, this function does not impliciy wait for commands in the default stream to complete, even if the specified stream is created with hipStreamNonBlocking = 0.

See also

hipStreamCreate, hipStreamCreateWithFlags, hipStreamCreateWithPriority, hipStreamSynchronize, hipStreamDestroy

4.5 Event Management

Functions

- hipError_t hipEventCreateWithFlags (hipEvent_t ∗event, unsigned flags)

  Create an event with the specified flags.
- hipError_t hipEventCreate (hipEvent_t ∗event)
- hipError_t hipEventRecord (hipEvent_t event, hipStream_t stream)

  Record an event in the specified stream.
- hipError_t hipEventDestroy (hipEvent_t event)

  Destroy the specified event.
- hipError_t hipEventSynchronize (hipEvent_t event)

  Wait for an event to complete.
- hipError_t hipEventElapsedTime (float ∗ms, hipEvent_t start, hipEvent_t stop)

  Return the elapsed time between two events.
- hipError_t hipEventQuery (hipEvent_t event)

  Query event status.

4.5.1 Detailed Description

4.5.2 Function Documentation

4.5.2.1 hipEventCreate()

```
hipError_t hipEventCreate (
            hipEvent_t * event )
```

Create an event

Parameters

in,out	*event*	Returns the newly created event.

Returns

#hipSuccess, #hipErrorNotInitialized, #hipErrorInvalidValue, #hipErrorLaunchFailure, #hipErrorOutOfMemory

See also

hipEventCreateWithFlags, hipEventRecord, hipEventQuery, hipEventSynchronize, hipEventDestroy, hipEventElapsedTime

4.5.2.2 hipEventCreateWithFlags()

```
hipError_t hipEventCreateWithFlags (
            hipEvent_t * event,
            unsigned flags )
```

Create an event with the specified flags.

Parameters

in,out	*event*	Returns the newly created event.
in	*flags*	Flags to control event behavior. Valid values are hipEventDefault, hipEventBlockingSync, hipEventDisableTiming, hipEventInterprocess

hipEventDefault : Default flag. The event will use active synchronization and will support timing. Blocking synchronization provides lowest possible latency at the expense of dedicating a CPU to poll on the event. hipEventBlockingSync : The event will use blocking synchronization : if hipEventSynchronize is called on this event, the thread will block until the event completes. This can increase latency for the synchroniation but can result in lower power and more resources for other CPU threads. hipEventDisableTiming : Disable recording of timing information. On ROCM platform, timing information is always recorded and this flag has no performance benefit.

Warning

On AMD platform, hipEventInterprocess support is under development. Use of this flag will return an error.

Returns

#hipSuccess, #hipErrorNotInitialized, #hipErrorInvalidValue, #hipErrorLaunchFailure, #hipErrorOutOfMemory

See also

hipEventCreate, hipEventSynchronize, hipEventDestroy, hipEventElapsedTime

4.5.2.3 hipEventDestroy()

```
hipError_t hipEventDestroy (
            hipEvent_t event )
```

Destroy the specified event.

Parameters

in	*event*	Event to destroy.

Returns

#hipSuccess, #hipErrorNotInitialized, #hipErrorInvalidValue, #hipErrorLaunchFailure

Releases memory associated with the event. If the event is recording but has not completed recording when hipEventDestroy() is called, the function will return immediately and the completion_future resources will be released later, when the hipDevice is synchronized.

See also

hipEventCreate, hipEventCreateWithFlags, hipEventQuery, hipEventSynchronize, hipEventRecord, hipEventElapsedTime

Returns

#hipSuccess

4.5.2.4 hipEventElapsedTime()

```
hipError_t hipEventElapsedTime (
            float * ms,
            hipEvent_t start,
            hipEvent_t stop )
```

Return the elapsed time between two events.

Parameters

out	*ms*	: Return time between start and stop in ms.
in	*start*	: Start event.
in	*stop*	: Stop event.

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotReady, #hipErrorInvalidHandle, #hipErrorNotInitialized, #hipErrorLaunchFailure

Computes the elapsed time between two events. Time is computed in ms, with a resolution of approximately 1 us.
Events which are recorded in a NULL stream will block until all commands on all other streams complete execution, and then record the timestamp.
Events which are recorded in a non-NULL stream will record their timestamp when they reach the head of the specified stream, after all previous commands in that stream have completed executing. Thus the time that the event recorded may be significantly after the host calls hipEventRecord().
If hipEventRecord() has not been called on either event, then #hipErrorInvalidHandle is returned. If hipEventRecord() has been called on both events, but the timestamp has not yet been recorded on one or both events (that is, hipEventQuery() would return #hipErrorNotReady on at least one of the events), then #hip↩ ErrorNotReady is returned.

See also

hipEventCreate, hipEventCreateWithFlags, hipEventQuery, hipEventDestroy, hipEventRecord, hipEventSynchronize

4.5.2.5 hipEventQuery()

```
hipError_t hipEventQuery (
            hipEvent_t event )
```

Query event status.

Parameters

in	*event*	Event to query.

Returns

#hipSuccess, #hipErrorNotReady, #hipErrorInvalidHandle, #hipErrorInvalidValue, #hipErrorNotInitialized, #hipErrorLaunchFailure

Query the status of the specified event. This function will return #hipErrorNotReady if all commands in the appropriate stream (specified to hipEventRecord()) have completed. If that work has not completed, or if hipEventRecord() was not called on the event, then #hipSuccess is returned.

See also

hipEventCreate, hipEventCreateWithFlags, hipEventRecord, hipEventDestroy, hipEventSynchronize, hipEventElapsedTime

4.5.2.6 hipEventRecord()

```
hipError_t hipEventRecord (
            hipEvent_t event,
            hipStream_t stream )
```

Record an event in the specified stream.

Parameters

in	*event*	event to record.
in	*stream*	stream in which to record event.

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized, #hipErrorInvalidHandle, #hipErrorLaunchFailure

hipEventQuery() or hipEventSynchronize() must be used to determine when the event transitions from "recording" (after hipEventRecord() is called) to "recorded" (when timestamps are set, if requested).
Events which are recorded in a non-NULL stream will transition to from recording to "recorded" state when they reach the head of the specified stream, after all previous commands in that stream have completed executing.
If hipEventRecord() has been previously called on this event, then this call will overwrite any existing state in event.
If this function is called on an event that is currently being recorded, results are undefined

- either outstanding recording may save state into the event, and the order is not guaranteed.

See also

hipEventCreate, hipEventCreateWithFlags, hipEventQuery, hipEventSynchronize, hipEventDestroy, hipEventElapsedTime

4.5.2.7 hipEventSynchronize()

```
hipError_t hipEventSynchronize (
            hipEvent_t event )
```

Wait for an event to complete.
This function will block until the event is ready, waiting for all previous work in the stream specified when event was recorded with hipEventRecord().
If hipEventRecord() has not been called on `event`, this function returns immediately.
TODO-hip- This function needs to support hipEventBlockingSync parameter.

Parameters

`in`	*event*	Event on which to wait.

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized, #hipErrorInvalidHandle, #hipErrorLaunchFailure

See also

hipEventCreate, hipEventCreateWithFlags, hipEventQuery, hipEventDestroy, hipEventRecord, hipEventElapsedTime

4.6 Memory Management

Functions

- hipError_t hipPointerGetAttributes (hipPointerAttribute_t *attributes, const void *ptr)

  Return attributes for the specified pointer.
- hipError_t hipMalloc (void **ptr, size_t size)

  Allocate memory on the default accelerator.
- hipError_t hipExtMallocWithFlags (void **ptr, size_t sizeBytes, unsigned int flags)

  Allocate memory on the default accelerator.
- hipError_t hipMallocHost (void **ptr, size_t size)

  Allocate pinned host memory [Deprecated].
- hipError_t hipMemAllocHost (void **ptr, size_t size)

  Allocate pinned host memory [Deprecated].
- hipError_t hipHostMalloc (void **ptr, size_t size, unsigned int flags)

  Allocate device accessible page locked host memory.
- hipError_t hipMallocManaged (void **dev_ptr, size_t size, unsigned int flags __dparm(hipMemAttachGlobal))

  Allocates memory that will be automatically managed by AMD HMM.
- hipError_t hipHostAlloc (void **ptr, size_t size, unsigned int flags)

  Allocate device accessible page locked host memory [Deprecated].
- hipError_t hipHostGetDevicePointer (void **devPtr, void *hstPtr, unsigned int flags)

  Get Device pointer from Host Pointer allocated through hipHostMalloc.
- hipError_t hipHostGetFlags (unsigned int *flagsPtr, void *hostPtr)

  Return flags associated with host pointer.
- hipError_t hipHostRegister (void *hostPtr, size_t sizeBytes, unsigned int flags)

  Register host memory so it can be accessed from the current device.
- hipError_t hipHostUnregister (void *hostPtr)

  Un-register host pointer.
- hipError_t hipMallocPitch (void **ptr, size_t *pitch, size_t width, size_t height)
- hipError_t hipMemAllocPitch (hipDeviceptr_t *dptr, size_t *pitch, size_t widthInBytes, size_t height, unsigned int elementSizeBytes)
- hipError_t hipFree (void *ptr)

  Free memory allocated by the hcc hip memory allocation API. This API performs an implicit hipDeviceSynchronize() call. If pointer is NULL, the hip runtime is initialized and hipSuccess is returned.
- hipError_t hipFreeHost (void *ptr)

  Free memory allocated by the hcc hip host memory allocation API. [Deprecated].
- hipError_t hipHostFree (void *ptr)

  Free memory allocated by the hcc hip host memory allocation API This API performs an implicit hipDeviceSynchronize() call. If pointer is NULL, the hip runtime is initialized and hipSuccess is returned.
- hipError_t hipMemcpy (void *dst, const void *src, size_t sizeBytes, hipMemcpyKind kind)

  Copy data from src to dst.
- hipError_t **hipMemcpyWithStream** (void *dst, const void *src, size_t sizeBytes, hipMemcpyKind kind, hipStream_t stream)
- hipError_t hipMemcpyHtoD (hipDeviceptr_t dst, void *src, size_t sizeBytes)

  Copy data from Host to Device.
- hipError_t hipMemcpyDtoH (void *dst, hipDeviceptr_t src, size_t sizeBytes)

  Copy data from Device to Host.
- hipError_t hipMemcpyDtoD (hipDeviceptr_t dst, hipDeviceptr_t src, size_t sizeBytes)

  Copy data from Device to Device.
- hipError_t hipMemcpyHtoDAsync (hipDeviceptr_t dst, void *src, size_t sizeBytes, hipStream_t stream)

  Copy data from Host to Device asynchronously.
- hipError_t hipMemcpyDtoHAsync (void *dst, hipDeviceptr_t src, size_t sizeBytes, hipStream_t stream)

Copy data from Device to Host asynchronously.

- hipError_t hipMemcpyDtoDAsync (hipDeviceptr_t dst, hipDeviceptr_t src, size_t sizeBytes, hipStream_t stream)

  Copy data from Device to Device asynchronously.

- hipError_t hipMemcpyAsync (void *dst, const void *src, size_t sizeBytes, hipMemcpyKind kind, hipStream_t stream __dparm(0))

  Copies `sizeBytes` bytes from the memory area pointed to by `src` to the memory area pointed to by `offset` bytes from the start of symbol `symbol`.

- hipError_t hipMemset (void *dst, int value, size_t sizeBytes)

  Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant byte value value.

- hipError_t hipMemsetD8 (hipDeviceptr_t dest, unsigned char value, size_t count)

  Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant byte value value.

- hipError_t hipMemsetD8Async (hipDeviceptr_t dest, unsigned char value, size_t count, hipStream_t stream __dparm(0))

  Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant byte value value.

- hipError_t hipMemsetD16 (hipDeviceptr_t dest, unsigned short value, size_t count)

  Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant short value value.

- hipError_t hipMemsetD16Async (hipDeviceptr_t dest, unsigned short value, size_t count, hipStream_t stream __dparm(0))

  Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant short value value.

- hipError_t hipMemsetD32 (hipDeviceptr_t dest, int value, size_t count)

  Fills the memory area pointed to by dest with the constant integer value for specified number of times.

- hipError_t hipMemsetAsync (void *dst, int value, size_t sizeBytes, hipStream_t stream __dparm(0))

  Fills the first sizeBytes bytes of the memory area pointed to by dev with the constant byte value value.

- hipError_t hipMemsetD32Async (hipDeviceptr_t dst, int value, size_t count, hipStream_t stream __dparm(0))

  Fills the memory area pointed to by dev with the constant integer value for specified number of times.

- hipError_t hipMemset2D (void *dst, size_t pitch, int value, size_t width, size_t height)

  Fills the memory area pointed to by dst with the constant value.

- hipError_t hipMemset2DAsync (void *dst, size_t pitch, int value, size_t width, size_t height, hipStream_t stream __dparm(0))

  Fills asynchronously the memory area pointed to by dst with the constant value.

- hipError_t hipMemset3D (hipPitchedPtr pitchedDevPtr, int value, hipExtent extent)

  Fills synchronously the memory area pointed to by pitchedDevPtr with the constant value.

- hipError_t hipMemset3DAsync (hipPitchedPtr pitchedDevPtr, int value, hipExtent extent, hipStream_t stream __dparm(0))

  Fills asynchronously the memory area pointed to by pitchedDevPtr with the constant value.

- hipError_t hipMemGetInfo (size_t *free, size_t *total)

  Query memory info. Return snapshot of free memory, and total allocatable memory on the device.

- hipError_t **hipMemPtrGetInfo** (void *ptr, size_t *size)
- hipError_t hipMallocArray (hipArray **array, const hipChannelFormatDesc *desc, size_t width, size_t height __dparm(0), unsigned int flags __dparm(hipArrayDefault))

  Allocate an array on the device.

- hipError_t **hipArrayCreate** (hipArray **pHandle, const HIP_ARRAY_DESCRIPTOR *pAllocateArray)
- hipError_t **hipArray3DCreate** (hipArray **array, const HIP_ARRAY3D_DESCRIPTOR *pAllocateArray)
- hipError_t **hipMalloc3D** (hipPitchedPtr *pitchedDevPtr, hipExtent extent)
- hipError_t hipFreeArray (hipArray *array)

  Frees an array on the device.

- hipError_t hipFreeMipmappedArray (hipMipmappedArray_t mipmappedArray)

  Frees a mipmapped array on the device.

- hipError_t hipMalloc3DArray (hipArray **array, const struct hipChannelFormatDesc *desc, struct hipExtent extent, unsigned int flags)

  Allocate an array on the device.

- hipError_t hipMallocMipmappedArray (hipMipmappedArray_t *mipmappedArray, const struct hipChannelFormatDesc *desc, struct hipExtent extent, unsigned int numLevels, unsigned int flags __dparm(0))

  Allocate a mipmapped array on the device.
- hipError_t hipGetMipmappedArrayLevel (hipArray_t *levelArray, hipMipmappedArray_const_t mipmappedArray, unsigned int level)

  Gets a mipmap level of a HIP mipmapped array.
- hipError_t hipMemcpy2D (void *dst, size_t dpitch, const void *src, size_t spitch, size_t width, size_t height, hipMemcpyKind kind)

  Copies data between host and device.
- hipError_t hipMemcpyParam2D (const hip_Memcpy2D *pCopy)

  Copies memory for 2D arrays.
- hipError_t hipMemcpyParam2DAsync (const hip_Memcpy2D *pCopy, hipStream_t stream __dparm(0))

  Copies memory for 2D arrays.
- hipError_t hipMemcpy2DAsync (void *dst, size_t dpitch, const void *src, size_t spitch, size_t width, size_t height, hipMemcpyKind kind, hipStream_t stream __dparm(0))

  Copies data between host and device.
- hipError_t hipMemcpy2DToArray (hipArray *dst, size_t wOffset, size_t hOffset, const void *src, size_t spitch, size_t width, size_t height, hipMemcpyKind kind)

  Copies data between host and device.
- hipError_t hipMemcpyToArray (hipArray *dst, size_t wOffset, size_t hOffset, const void *src, size_t count, hipMemcpyKind kind)

  Copies data between host and device.
- hipError_t hipMemcpyFromArray (void *dst, hipArray_const_t srcArray, size_t wOffset, size_t hOffset, size_t count, hipMemcpyKind kind)

  Copies data between host and device.
- hipError_t hipMemcpy2DFromArray (void *dst, size_t dpitch, hipArray_const_t src, size_t wOffset, size_t hOffset, size_t width, size_t height, hipMemcpyKind kind)

  Copies data between host and device.
- hipError_t hipMemcpy2DFromArrayAsync (void *dst, size_t dpitch, hipArray_const_t src, size_t wOffset, size_t hOffset, size_t width, size_t height, hipMemcpyKind kind, hipStream_t stream __dparm(0))

  Copies data between host and device asynchronously.
- hipError_t hipMemcpyAtoH (void *dst, hipArray *srcArray, size_t srcOffset, size_t count)

  Copies data between host and device.
- hipError_t hipMemcpyHtoA (hipArray *dstArray, size_t dstOffset, const void *srcHost, size_t count)

  Copies data between host and device.
- hipError_t hipMemcpy3D (const struct hipMemcpy3DParms *p)

  Copies data between host and device.
- hipError_t hipMemcpy3DAsync (const struct hipMemcpy3DParms *p, hipStream_t stream __dparm(0))

  Copies data between host and device asynchronously.
- hipError_t hipDrvMemcpy3D (const HIP_MEMCPY3D *pCopy)

  Copies data between host and device.
- hipError_t hipDrvMemcpy3DAsync (const HIP_MEMCPY3D *pCopy, hipStream_t stream)

  Copies data between host and device asynchronously.

4.6.1 Detailed Description

The following CUDA APIs are not currently supported:

- cudaMalloc3D
- cudaMalloc3DArray
- TODO - more 2D, 3D, array APIs here.

4.6.2 Function Documentation

4.6.2.1 hipDrvMemcpy3D()

```
hipError_t hipDrvMemcpy3D (
            const HIP_MEMCPY3D * pCopy )
```

Copies data between host and device.

Parameters

in	*pCopy*	3D memory copy parameters

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩InvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2DToArray, hipMemcpy2D, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.2 hipDrvMemcpy3DAsync()

```
hipError_t hipDrvMemcpy3DAsync (
            const HIP_MEMCPY3D * pCopy,
            hipStream_t stream )
```

Copies data between host and device asynchronously.

Parameters

in	*pCopy*	3D memory copy parameters
in	*stream*	Stream to use

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩InvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2DToArray, hipMemcpy2D, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.3 hipExtMallocWithFlags()

```
hipError_t hipExtMallocWithFlags (
            void ** ptr,
            size_t sizeBytes,
            unsigned int flags )
```

Allocate memory on the default accelerator.

Parameters

out	*ptr*	Pointer to the allocated memory
in	*size*	Requested memory size
in	*flags*	Type of memory allocation

If size is 0, no memory is allocated, ∗ptr returns nullptr, and hipSuccess is returned.

Returns

#hipSuccess, #hipErrorOutOfMemory, #hipErrorInvalidValue (bad context, null ∗ptr)

See also

hipMallocPitch, hipFree, hipMallocArray, hipFreeArray, hipMalloc3D, hipMalloc3DArray, hipHostFree, hipHostMalloc

4.6.2.4 hipFree()

```
hipError_t hipFree (
            void * ptr )
```

Free memory allocated by the hcc hip memory allocation API. This API performs an implicit hipDeviceSynchronize() call. If pointer is NULL, the hip runtime is initialized and hipSuccess is returned.

Parameters

in	*ptr*	Pointer to memory to be freed

Returns

#hipSuccess

#hipErrorInvalidDevicePointer (if pointer is invalid, including host pointers allocated with hipHostMalloc)

See also

hipMalloc, hipMallocPitch, hipMallocArray, hipFreeArray, hipHostFree, hipMalloc3D, hipMalloc3DArray, hipHostMalloc

4.6.2.5 hipFreeArray()

```
hipError_t hipFreeArray (
            hipArray * array )
```

Frees an array on the device.

Parameters

in	*array*	Pointer to array to free

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

See also

hipMalloc, hipMallocPitch, hipFree, hipMallocArray, hipHostMalloc, hipHostFree

4.6.2.6 hipFreeHost()

```
static hipError_t hipFreeHost (
            void * ptr )  [inline]
```

Free memory allocated by the hcc hip host memory allocation API. [Deprecated].

Parameters

in	*ptr*	Pointer to memory to be freed

Returns

#hipSuccess, #hipErrorInvalidValue (if pointer is invalid, including device pointers allocated with hipMalloc)

4.6.2.7 hipFreeMipmappedArray()

```
hipError_t hipFreeMipmappedArray (
            hipMipmappedArray_t mipmappedArray )
```

Frees a mipmapped array on the device.

Parameters

in	*mipmappedArray*	- Pointer to mipmapped array to free

Returns

#hipSuccess, #hipErrorInvalidValue

4.6.2.8 hipGetMipmappedArrayLevel()

```
hipError_t hipGetMipmappedArrayLevel (
            hipArray_t * levelArray,
            hipMipmappedArray_const_t mipmappedArray,
            unsigned int level )
```

Gets a mipmap level of a HIP mipmapped array.

Parameters

out	*levelArray*	- Returned mipmap level HIP array
in	*mipmappedArray*	- HIP mipmapped array
in	*level*	- Mipmap level

Returns

#hipSuccess, #hipErrorInvalidValue

4.6.2.9 hipHostAlloc()

```
static hipError_t hipHostAlloc (
            void ** ptr,
            size_t size,
            unsigned int flags )  [inline]
```

Allocate device accessible page locked host memory [Deprecated].

Parameters

out	*ptr*	Pointer to the allocated host pinned memory
in	*size*	Requested memory size
in	*flags*	Type of host memory allocation

If size is 0, no memory is allocated, ∗ptr returns nullptr, and hipSuccess is returned.

Returns

#hipSuccess, #hipErrorOutOfMemory

4.6.2.10 hipHostFree()

```
hipError_t hipHostFree (
            void * ptr )
```

Free memory allocated by the hcc hip host memory allocation API This API performs an implicit hipDeviceSynchronize() call. If pointer is NULL, the hip runtime is initialized and hipSuccess is returned.

Parameters

in	*ptr*	Pointer to memory to be freed

Returns

#hipSuccess, #hipErrorInvalidValue (if pointer is invalid, including device pointers allocated with hipMalloc)

See also

hipMalloc, hipMallocPitch, hipFree, hipMallocArray, hipFreeArray, hipMalloc3D, hipMalloc3DArray, hipHostMalloc

4.6.2.11 hipHostGetDevicePointer()

```
hipError_t hipHostGetDevicePointer (
            void ** devPtr,
            void * hstPtr,
            unsigned int flags )
```

Get Device pointer from Host Pointer allocated through hipHostMalloc.

Parameters

out	*dstPtr*	Device Pointer mapped to passed host pointer
in	*hstPtr*	Host Pointer allocated through hipHostMalloc
in	*flags*	Flags to be passed for extension

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorOutOfMemory

See also

hipSetDeviceFlags, hipHostMalloc

4.6.2.12 hipHostGetFlags()

```
hipError_t hipHostGetFlags (
            unsigned int * flagsPtr,
            void * hostPtr )
```

Return flags associated with host pointer.

Parameters

out	*flagsPtr*	Memory location to store flags
in	*hostPtr*	Host Pointer allocated through hipHostMalloc

Returns

#hipSuccess, #hipErrorInvalidValue

See also

hipHostMalloc

4.6.2.13 hipHostMalloc()

```
hipError_t hipHostMalloc (
             void ** ptr,
             size_t size,
             unsigned int flags )
```

Allocate device accessible page locked host memory.

Parameters

out	*ptr*	Pointer to the allocated host pinned memory
in	*size*	Requested memory size
in	*flags*	Type of host memory allocation

If size is 0, no memory is allocated, *ptr returns nullptr, and hipSuccess is returned.

Returns

#hipSuccess, #hipErrorOutOfMemory

See also

hipSetDeviceFlags, hipHostFree

4.6.2.14 hipHostRegister()

```
hipError_t hipHostRegister (
             void * hostPtr,
             size_t sizeBytes,
             unsigned int flags )
```

Register host memory so it can be accessed from the current device.

Parameters

out	*hostPtr*	Pointer to host memory to be registered.
in	*sizeBytes*	size of the host memory
in	*flags.*	See below.

Flags:

- hipHostRegisterDefault Memory is Mapped and Portable

- hipHostRegisterPortable Memory is considered registered by all contexts. HIP only supports one context so this is always assumed true.
- hipHostRegisterMapped Map the allocation into the address space for the current device. The device pointer can be obtained with hipHostGetDevicePointer.

After registering the memory, use hipHostGetDevicePointer to obtain the mapped device pointer. On many systems, the mapped device pointer will have a different value than the mapped host pointer. Applications must use the device pointer in device code, and the host pointer in device code.
On some systems, registered memory is pinned. On some systems, registered memory may not be actually be pinned but uses OS or hardware facilities to all GPU access to the host memory.
Developers are strongly encouraged to register memory blocks which are aligned to the host cache-line size. (typically 64-bytes but can be obtains from the CPUID instruction).
If registering non-aligned pointers, the application must take care when register pointers from the same cache line on different devices. HIP's coarse-grained synchronization model does not guarantee correct results if different devices write to different parts of the same cache block - typically one of the writes will "win" and overwrite data from the other registered memory region.

Returns

#hipSuccess, #hipErrorOutOfMemory

See also

hipHostUnregister, hipHostGetFlags, hipHostGetDevicePointer

4.6.2.15 hipHostUnregister()

```
hipError_t hipHostUnregister (
            void * hostPtr )
```

Un-register host pointer.

Parameters

in	*hostPtr*	Host pointer previously registered with hipHostRegister

Returns

Error code

See also

hipHostRegister

4.6.2.16 hipMalloc()

```
hipError_t hipMalloc (
            void ** ptr,
            size_t size )
```

Allocate memory on the default accelerator.

Parameters

out	*ptr*	Pointer to the allocated memory
in	*size*	Requested memory size

If size is 0, no memory is allocated, ∗ptr returns nullptr, and hipSuccess is returned.

Returns

#hipSuccess, #hipErrorOutOfMemory, #hipErrorInvalidValue (bad context, null ∗ptr)

See also

hipMallocPitch, hipFree, hipMallocArray, hipFreeArray, hipMalloc3D, hipMalloc3DArray, hipHostFree, hipHostMalloc

4.6.2.17 hipMalloc3DArray()

```
hipError_t hipMalloc3DArray (
            hipArray ** array,
            const struct hipChannelFormatDesc * desc,
            struct hipExtent extent,
            unsigned int flags )
```

Allocate an array on the device.

Parameters

out	*array*	Pointer to allocated array in device memory
in	*desc*	Requested channel format
in	*extent*	Requested array allocation width, height and depth
in	*flags*	Requested properties of allocated array

Returns

#hipSuccess, #hipErrorOutOfMemory

See also

hipMalloc, hipMallocPitch, hipFree, hipFreeArray, hipHostMalloc, hipHostFree

4.6.2.18 hipMallocArray()

```
hipError_t hipMallocArray (
            hipArray ** array,
            const hipChannelFormatDesc * desc,
            size_t width,
            size_t height  __dparm0,
            unsigned int flags  __dparmhipArrayDefault )
```

Allocate an array on the device.

Parameters

out	*array*	Pointer to allocated array in device memory
in	*desc*	Requested channel format
in	*width*	Requested array allocation width
in	*height*	Requested array allocation height
in	*flags*	Requested properties of allocated array

Returns

#hipSuccess, #hipErrorOutOfMemory

See also

hipMalloc, hipMallocPitch, hipFree, hipFreeArray, hipHostMalloc, hipHostFree

4.6.2.19 hipMallocHost()

```
static hipError_t hipMallocHost (
            void ** ptr,
            size_t size )  [inline]
```

Allocate pinned host memory [Deprecated].

Parameters

out	*ptr*	Pointer to the allocated host pinned memory
in	*size*	Requested memory size

If size is 0, no memory is allocated, *ptr returns nullptr, and hipSuccess is returned.

Returns

#hipSuccess, #hipErrorOutOfMemory

4.6.2.20 hipMallocManaged()

```
hipError_t hipMallocManaged (
            void ** dev_ptr,
            size_t size,
            unsigned int flags  __dparmhipMemAttachGlobal )
```

Allocates memory that will be automatically managed by AMD HMM.

Parameters

out	*dev_ptr*	- pointer to allocated device memory
in	*size*	- requested allocation size in bytes
in	*flags*	- must be either hipMemAttachGlobal or hipMemAttachHost (defaults to hipMemAttachGlobal)

Returns

#hipSuccess, #hipErrorMemoryAllocation, #hipErrorNotSupported, #hipErrorInvalidValue

4.6.2.21 hipMallocMipmappedArray()

```
hipError_t hipMallocMipmappedArray (
            hipMipmappedArray_t * mipmappedArray,
            const struct hipChannelFormatDesc * desc,
            struct hipExtent extent,
            unsigned int numLevels,
            unsigned int flags  __dparm0 )
```

Allocate a mipmapped array on the device.

Parameters

out	*mipmappedArray*	- Pointer to allocated mipmapped array in device memory
in	*desc*	- Requested channel format
in	*extent*	- Requested allocation size (width field in elements)
in	*numLevels*	- Number of mipmap levels to allocate
in	*flags*	- Flags for extensions

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryAllocation

4.6.2.22 hipMallocPitch()

```
hipError_t hipMallocPitch (
            void ** ptr,
            size_t * pitch,
            size_t width,
            size_t height )
```

Allocates at least width (in bytes) ∗ height bytes of linear memory Padding may occur to ensure alighnment requirements are met for the given row The change in width size due to padding will be returned in ∗pitch. Currently the alignment is set to 128 bytes

Parameters

out	*ptr*	Pointer to the allocated device memory
out	*pitch*	Pitch for allocation (in bytes)
in	*width*	Requested pitched allocation width (in bytes)
in	*height*	Requested pitched allocation height

If size is 0, no memory is allocated, ∗ptr returns nullptr, and hipSuccess is returned.

Returns

Error code

See also

hipMalloc, hipFree, hipMallocArray, hipFreeArray, hipHostFree, hipMalloc3D, hipMalloc3DArray, hipHostMalloc

4.6.2.23 hipMemAllocHost()

```
static hipError_t hipMemAllocHost (
            void ** ptr,
            size_t size )  [inline]
```

Allocate pinned host memory [Deprecated].

Parameters

out	*ptr*	Pointer to the allocated host pinned memory
in	*size*	Requested memory size

If size is 0, no memory is allocated, ∗ptr returns nullptr, and hipSuccess is returned.

Returns

#hipSuccess, #hipErrorOutOfMemory

4.6.2.24 hipMemAllocPitch()

```
hipError_t hipMemAllocPitch (
            hipDeviceptr_t * dptr,
            size_t * pitch,
            size_t widthInBytes,
            size_t height,
            unsigned int elementSizeBytes )
```

Allocates at least width (in bytes) ∗ height bytes of linear memory Padding may occur to ensure alighnment requirements are met for the given row The change in width size due to padding will be returned in ∗pitch. Currently the alignment is set to 128 bytes

Parameters

out	*dptr*	Pointer to the allocated device memory
out	*pitch*	Pitch for allocation (in bytes)
in	*width*	Requested pitched allocation width (in bytes)
in	*height*	Requested pitched allocation height

If size is 0, no memory is allocated, *ptr returns nullptr, and hipSuccess is returned. The intended usage of pitch is as a separate parameter of the allocation, used to compute addresses within the 2D array. Given the row and column of an array element of type T, the address is computed as: T* pElement = (T∗)((char∗)BaseAddress + Row ∗ Pitch) + Column;

Returns

Error code

4.6.2.25 hipMemcpy()

```
hipError_t hipMemcpy (
            void * dst,
            const void * src,
            size_t sizeBytes,
            hipMemcpyKind kind )
```

Copy data from src to dst.
It supports memory from host to device, device to host, device to device and host to host The src and dst must not overlap.
For hipMemcpy, the copy is always performed by the current device (set by hipSetDevice). For multi-gpu or peer-to-peer configurations, it is recommended to set the current device to the device where the src data is physically located. For optimal peer-to-peer copies, the copy device must be able to access the src and dst pointers (by calling hipDeviceEnablePeerAccess with copy agent as the current device and src/dest as the peerDevice argument. if this is not done, the hipMemcpy will still work, but will perform the copy using a staging buffer on the host. Calling hipMemcpy with dst and src pointers that do not match the hipMemcpyKind results in undefined behavior.

Parameters

out	*dst*	Data being copy to

Parameters

in	*src*	Data being copy from
in	*sizeBytes*	Data size in bytes
in	*copyType*	Memory copy type

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree, #hipErrorUnknowni

4.6.2.26 hipMemcpy2D()

```
hipError_t hipMemcpy2D (
            void * dst,
            size_t dpitch,
            const void * src,
            size_t spitch,
            size_t width,
            size_t height,
            hipMemcpyKind kind )
```

Copies data between host and device.

Parameters

in	*dst*	Destination memory address
in	*dpitch*	Pitch of destination memory
in	*src*	Source memory address
in	*spitch*	Pitch of source memory
in	*width*	Width of matrix transfer (columns in bytes)
in	*height*	Height of matrix transfer (rows)
in	*kind*	Type of transfer

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩InvalidMemcpyDirection

4.6.2.27 hipMemcpy2DAsync()

```
hipError_t hipMemcpy2DAsync (
            void * dst,
```

```
            size_t dpitch,
            const void * src,
            size_t spitch,
            size_t width,
            size_t height,
            hipMemcpyKind kind,
            hipStream_t stream  __dparm0 )
```

Copies data between host and device.

Parameters

in	*dst*	Destination memory address
in	*dpitch*	Pitch of destination memory
in	*src*	Source memory address
in	*spitch*	Pitch of source memory
in	*width*	Width of matrix transfer (columns in bytes)
in	*height*	Height of matrix transfer (rows)
in	*kind*	Type of transfer
in	*stream*	Stream to use

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩InvalidMemcpyDirection

4.6.2.28 hipMemcpy2DFromArray()

```
hipError_t hipMemcpy2DFromArray (
            void * dst,
            size_t dpitch,
            hipArray_const_t src,
            size_t wOffset,
            size_t hOffset,
            size_t width,
            size_t height,
            hipMemcpyKind kind )
```

Copies data between host and device.

Parameters

in	*dst*	Destination memory address
in	*dpitch*	Pitch of destination memory
in	*src*	Source memory address
in	*wOffset*	Source starting X offset
in	*hOffset*	Source starting Y offset
in	*width*	Width of matrix transfer (columns in bytes)
in	*height*	Height of matrix transfer (rows)
in	*kind*	Type of transfer

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩ InvalidMemcpyDirection

4.6.2.29 hipMemcpy2DFromArrayAsync()

```
hipError_t hipMemcpy2DFromArrayAsync (
            void * dst,
            size_t dpitch,
            hipArray_const_t src,
            size_t wOffset,
            size_t hOffset,
            size_t width,
            size_t height,
            hipMemcpyKind kind,
            hipStream_t stream  __dparm0 )
```

Copies data between host and device asynchronously.

Parameters

in	*dst*	Destination memory address
in	*dpitch*	Pitch of destination memory
in	*src*	Source memory address
in	*wOffset*	Source starting X offset
in	*hOffset*	Source starting Y offset
in	*width*	Width of matrix transfer (columns in bytes)
in	*height*	Height of matrix transfer (rows)
in	*kind*	Type of transfer
in	*stream*	Accelerator view which the copy is being enqueued

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩ InvalidMemcpyDirection

4.6.2.30 hipMemcpy2DToArray()

```
hipError_t hipMemcpy2DToArray (
            hipArray * dst,
            size_t wOffset,
            size_t hOffset,
            const void * src,
            size_t spitch,
            size_t width,
            size_t height,
            hipMemcpyKind kind )
```

Copies data between host and device.

Parameters

in	*dst*	Destination memory address
in	*wOffset*	Destination starting X offset
in	*hOffset*	Destination starting Y offset
in	*src*	Source memory address
in	*spitch*	Pitch of source memory
in	*width*	Width of matrix transfer (columns in bytes)
in	*height*	Height of matrix transfer (rows)
in	*kind*	Type of transfer

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩ InvalidMemcpyDirection

4.6.2.31 hipMemcpy3D()

```
hipError_t hipMemcpy3D (
            const struct hipMemcpy3DParms * p )
```

Copies data between host and device.

Parameters

in	*p*	3D memory copy parameters

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩ InvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2DToArray, hipMemcpy2D, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.32 hipMemcpy3DAsync()

```
hipError_t hipMemcpy3DAsync (
            const struct hipMemcpy3DParms * p,
            hipStream_t stream  __dparm0 )
```

Copies data between host and device asynchronously.

Parameters

in	*p*	3D memory copy parameters
in	*stream*	Stream to use

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipErrorInvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2DToArray, hipMemcpy2D, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.33 hipMemcpyAsync()

```
hipError_t hipMemcpyAsync (
            void * dst,
            const void * src,
            size_t sizeBytes,
            hipMemcpyKind kind,
            hipStream_t stream  __dparm0 )
```

Copies `sizeBytes` bytes from the memory area pointed to by `src` to the memory area pointed to by `offset` bytes from the start of symbol `symbol`.
The memory areas may not overlap. Symbol can either be a variable that resides in global or constant memory space, or it can be a character string, naming a variable that resides in global or constant memory space. Kind can be either hipMemcpyHostToDevice or hipMemcpyDeviceToDevice TODO: cudaErrorInvalidSymbol and cudaErrorInvalidMemcpyDirection is not supported, use hipErrorUnknown for now.

Parameters

in	*symbolName*	- Symbol destination on device
in	*src*	- Data being copy from
in	*sizeBytes*	- Data size in bytes
in	*offset*	- Offset from start of symbol in bytes
in	*kind*	- Type of transfer

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree, #hipErrorUnknown

See also

hipMemcpy, hipMemcpy2D, hipMemcpyToArray, hipMemcpy2DToArray, hipMemcpyFromArray, hipMemcpy2DFromArray, hipMemcpyArrayToArray, hipMemcpy2DArrayToArray, hipMemcpyFromSymbol, hipMemcpyAsync, hipMemcpy2DAsync, hipMemcpyToArrayAsync, hipMemcpy2DToArrayAsync, hipMemcpyFromArrayAsync, hipMemcpy2DFromArrayAsync, hipMemcpyToSymbolAsync, hipMemcpyFromSymbolAsync

Copies `sizeBytes` bytes from the memory area pointed to by `src` to the memory area pointed to by `offset` bytes from the start of symbol `symbol`
The memory areas may not overlap. Symbol can either be a variable that resides in global or constant memory space, or it can be a character string, naming a variable that resides in global or constant memory space. Kind can be either hipMemcpyHostToDevice or hipMemcpyDeviceToDevice hipMemcpyToSymbolAsync() is asynchronous with respect to the host, so the call may return before copy is complete. TODO: cudaErrorInvalidSymbol and cudaErrorInvalidMemcpyDirection is not supported, use hipErrorUnknown for now.

Parameters

in	*symbolName*	- Symbol destination on device
in	*src*	- Data being copy from
in	*sizeBytes*	- Data size in bytes
in	*offset*	- Offset from start of symbol in bytes
in	*kind*	- Type of transfer

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree, #hipErrorUnknown

Copy data from src to dst asynchronously.

Warning

If host or dest are not pinned, the memory copy will be performed synchronously. For best performance, use hipHostMalloc to allocate host memory that is transferred asynchronously.

on HCC hipMemcpyAsync does not support overlapped H2D and D2H copies. For hipMemcpy, the copy is always performed by the device associated with the specified stream.

For multi-gpu or peer-to-peer configurations, it is recommended to use a stream which is a attached to the device where the src data is physically located. For optimal peer-to-peer copies, the copy device must be able to access the src and dst pointers (by calling hipDeviceEnablePeerAccess with copy agent as the current device and src/dest as the peerDevice argument. if this is not done, the hipMemcpy will still work, but will perform the copy using a staging buffer on the host.

Parameters

out	*dst*	Data being copy to
in	*src*	Data being copy from
in	*sizeBytes*	Data size in bytes
in	*accelerator_view*	Accelerator view which the copy is being enqueued

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree, #hipErrorUnknown

4.6.2.34 hipMemcpyAtoH()

```
hipError_t hipMemcpyAtoH (
            void * dst,
            hipArray * srcArray,
            size_t srcOffset,
            size_t count )
```

Copies data between host and device.

Parameters

in	*dst*	Destination memory address
in	*srcArray*	Source array
in	*srcoffset*	Offset in bytes of source array
in	*count*	Size of memory copy in bytes

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩ InvalidMemcpyDirection

4.6.2.43 hipMemcpyParam2D()

```
hipError_t hipMemcpyParam2D (
            const hip_Memcpy2D * pCopy )
```

Copies memory for 2D arrays.

Parameters

in	*pCopy*	Parameters for the memory copy

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipErrorInvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2D, hipMemcpyToArray, hipMemcpy2DToArray, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.44 hipMemcpyParam2DAsync()

```
hipError_t hipMemcpyParam2DAsync (
            const hip_Memcpy2D * pCopy,
            hipStream_t stream  __dparm0 )
```

Copies memory for 2D arrays.

Parameters

in	*pCopy*	Parameters for the memory copy
in	*stream*	Stream to use

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipErrorInvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2D, hipMemcpyToArray, hipMemcpy2DToArray, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.45 hipMemcpyToArray()

```
hipError_t hipMemcpyToArray (
            hipArray * dst,
            size_t wOffset,
            size_t hOffset,
            const void * src,
            size_t count,
            hipMemcpyKind kind )
```

Copies data between host and device.

Parameters

in	*dst*	Destination memory address
in	*wOffset*	Destination starting X offset
in	*hOffset*	Destination starting Y offset
in	*src*	Source memory address
in	*count*	size in bytes to copy
in	*kind*	Type of transfer

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidPitchValue, #hipErrorInvalidDevicePointer, #hipError↩ InvalidMemcpyDirection

See also

hipMemcpy, hipMemcpy2DToArray, hipMemcpy2D, hipMemcpyFromArray, hipMemcpyToSymbol, hipMemcpyAsync

4.6.2.46 hipMemGetInfo()

```
hipError_t hipMemGetInfo (
            size_t * free,
            size_t * total )
```

Query memory info. Return snapshot of free memory, and total allocatable memory on the device.
Returns in ∗free a snapshot of the current free memory.

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue

Warning

On HCC, the free memory only accounts for memory allocated by this process and may be optimistic.

4.6.2.47 hipMemset()

```
hipError_t hipMemset (
            void * dst,
            int value,
            size_t sizeBytes )
```

Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant byte value value.

Parameters

out	*dst*	Data being filled
in	*constant*	value to be set
in	*sizeBytes*	Data size in bytes

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

4.6.2.48 hipMemset2D()

```
hipError_t hipMemset2D (
            void * dst,
            size_t pitch,
            int value,
            size_t width,
            size_t height )
```

Fills the memory area pointed to by dst with the constant value.

Parameters

out	*dst*	Pointer to device memory
in	*pitch*	- data size in bytes
in	*value*	- constant value to be set
in	*width*	
in	*height*	

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree

4.6.2.49 hipMemset2DAsync()

```
hipError_t hipMemset2DAsync (
            void * dst,
            size_t pitch,
            int value,
            size_t width,
            size_t height,
            hipStream_t stream __dparm0 )
```

Fills asynchronously the memory area pointed to by dst with the constant value.

Parameters

in	*dst*	Pointer to device memory
in	*pitch*	- data size in bytes
in	*value*	- constant value to be set
in	*width*	
in	*height*	
in	*stream*	

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree

4.6.2.50 hipMemset3D()

```
hipError_t hipMemset3D (
```

```
            hipPitchedPtr pitchedDevPtr,
            int value,
            hipExtent extent )
```

Fills synchronously the memory area pointed to by pitchedDevPtr with the constant value.

Parameters

in	*pitchedDevPtr*	
in	*value*	- constant value to be set
in	*extent*	

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree

4.6.2.51 hipMemset3DAsync()

```
hipError_t hipMemset3DAsync (
            hipPitchedPtr pitchedDevPtr,
            int value,
            hipExtent extent,
            hipStream_t stream  __dparm0 )
```

Fills asynchronously the memory area pointed to by pitchedDevPtr with the constant value.

Parameters

in	*pitchedDevPtr*	
in	*value*	- constant value to be set
in	*extent*	
in	*stream*	

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree

4.6.2.52 hipMemsetAsync()

```
hipError_t hipMemsetAsync (
            void * dst,
            int value,
            size_t sizeBytes,
            hipStream_t stream  __dparm0 )
```

Fills the first sizeBytes bytes of the memory area pointed to by dev with the constant byte value value.
hipMemsetAsync() is asynchronous with respect to the host, so the call may return before the memset is complete. The operation can optionally be associated to a stream by passing a non-zero stream argument. If stream is non-zero, the operation may overlap with operations in other streams.

Parameters

out	*dst*	Pointer to device memory
in	*value*	- Value to set for each byte of specified memory
in	*sizeBytes*	- Size in bytes to set
in	*stream*	- Stream identifier

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree

4.6.2.53 hipMemsetD16()

```
hipError_t hipMemsetD16 (
            hipDeviceptr_t dest,
            unsigned short value,
            size_t count )
```

Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant short value value.

Parameters

out	*dst*	Data ptr to be filled
in	*constant*	value to be set
in	*number*	of values to be set

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

4.6.2.54 hipMemsetD16Async()

```
hipError_t hipMemsetD16Async (
            hipDeviceptr_t dest,
            unsigned short value,
            size_t count,
            hipStream_t stream  __dparm0 )
```

Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant short value value.
hipMemsetD16Async() is asynchronous with respect to the host, so the call may return before the memset is complete. The operation can optionally be associated to a stream by passing a non-zero stream argument. If stream is non-zero, the operation may overlap with operations in other streams.

Parameters

out	*dst*	Data ptr to be filled
in	*constant*	value to be set
in	*number*	of values to be set
in	*stream*	- Stream identifier

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

4.6.2.55 hipMemsetD32()

```
hipError_t hipMemsetD32 (
            hipDeviceptr_t dest,
            int value,
            size_t count )
```

Fills the memory area pointed to by dest with the constant integer value for specified number of times.

Parameters

out	*dst*	Data being filled
in	*constant*	value to be set
in	*number*	of values to be set

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

4.6.2.56 hipMemsetD32Async()

```
hipError_t hipMemsetD32Async (
            hipDeviceptr_t dst,
            int value,
            size_t count,
            hipStream_t stream  __dparm0 )
```

Fills the memory area pointed to by dev with the constant integer value for specified number of times. hipMemsetD32Async() is asynchronous with respect to the host, so the call may return before the memset is complete. The operation can optionally be associated to a stream by passing a non-zero stream argument. If stream is non-zero, the operation may overlap with operations in other streams.

Parameters

out	*dst*	Pointer to device memory
in	*value*	- Value to set for each byte of specified memory
in	*count*	- number of values to be set
in	*stream*	- Stream identifier

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorMemoryFree

4.6.2.57 hipMemsetD8()

```
hipError_t hipMemsetD8 (
            hipDeviceptr_t dest,
            unsigned char value,
            size_t count )
```

Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant byte value value.

Parameters

out	*dst*	Data ptr to be filled
in	*constant*	value to be set
in	*number*	of values to be set

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

4.6.2.58 hipMemsetD8Async()

```
hipError_t hipMemsetD8Async (
            hipDeviceptr_t dest,
            unsigned char value,
            size_t count,
            hipStream_t stream  __dparm0 )
```

Fills the first sizeBytes bytes of the memory area pointed to by dest with the constant byte value value. hipMemsetD8Async() is asynchronous with respect to the host, so the call may return before the memset is complete. The operation can optionally be associated to a stream by passing a non-zero stream argument. If stream is non-zero, the operation may overlap with operations in other streams.

Parameters

out	*dst*	Data ptr to be filled
in	*constant*	value to be set
in	*number*	of values to be set
in	*stream*	- Stream identifier

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorNotInitialized

4.6.2.59 hipPointerGetAttributes()

```
hipError_t hipPointerGetAttributes (
            hipPointerAttribute_t * attributes,
            const void * ptr )
```

Return attributes for the specified pointer.

Parameters

out	*attributes*	for the specified pointer
in	*pointer*	to get attributes for

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue

See also

hipGetDeviceCount, hipGetDevice, hipSetDevice, hipChooseDevice

4.7 Device Memory Access

Macros

- #define **USE_PEER_NON_UNIFIED** 1

Functions

- hipError_t hipDeviceCanAccessPeer (int ∗canAccessPeer, int deviceId, int peerDeviceId)

  Determine if a device can access a peer's memory.
- hipError_t hipDeviceEnablePeerAccess (int peerDeviceId, unsigned int flags)

  Enable direct access from current device's virtual address space to memory allocations physically located on a peer device.
- hipError_t hipDeviceDisablePeerAccess (int peerDeviceId)

  Disable direct access from current device's virtual address space to memory allocations physically located on a peer device.
- hipError_t hipMemGetAddressRange (hipDeviceptr_t ∗pbase, size_t ∗psize, hipDeviceptr_t dptr)

  Get information on memory allocations.
- hipError_t hipMemcpyPeer (void ∗dst, int dstDeviceId, const void ∗src, int srcDeviceId, size_t sizeBytes)

  Copies memory from one device to memory on another device.
- hipError_t hipMemcpyPeerAsync (void ∗dst, int dstDeviceId, const void ∗src, int srcDevice, size_t sizeBytes, hipStream_t stream __dparm(0))

  Copies memory from one device to memory on another device.

4.7.1 Detailed Description

Warning

PeerToPeer support is experimental.

4.7.2 Function Documentation

4.7.2.1 hipDeviceCanAccessPeer()

```
hipError_t hipDeviceCanAccessPeer (
            int * canAccessPeer,
            int deviceId,
            int peerDeviceId )
```

Determine if a device can access a peer's memory.

Parameters

out	*canAccessPeer*	Returns the peer access capability (0 or 1)
in	*device*	- device from where memory may be accessed.
in	*peerDevice*	- device where memory is physically located

Returns "1" in `canAccessPeer` if the specified `device` is capable of directly accessing memory physically located on peerDevice , or "0" if not.
Returns "0" in `canAccessPeer` if deviceId == peerDeviceId, and both are valid devices : a device is not a peer of itself.

Returns

#hipSuccess,

#hipErrorInvalidDevice if deviceId or peerDeviceId are not valid devices

4.7.2.2 hipDeviceDisablePeerAccess()

```
hipError_t hipDeviceDisablePeerAccess (
            int peerDeviceId )
```

Disable direct access from current device's virtual address space to memory allocations physically located on a peer device.
Returns hipErrorPeerAccessNotEnabled if direct access to memory on peerDevice has not yet been enabled from the current device.

Parameters

in	*peer↩ DeviceId*	

Returns

#hipSuccess, #hipErrorPeerAccessNotEnabled

4.7.2.3 hipDeviceEnablePeerAccess()

```
hipError_t hipDeviceEnablePeerAccess (
            int peerDeviceId,
            unsigned int flags )
```

Enable direct access from current device's virtual address space to memory allocations physically located on a peer device.
Memory which already allocated on peer device will be mapped into the address space of the current device. In addition, all future memory allocations on peerDeviceId will be mapped into the address space of the current device when the memory is allocated. The peer memory remains accessible from the current device until a call to hip↩ DeviceDisablePeerAccess or hipDeviceReset.

Parameters

in	*peer↩ DeviceId*	
in	*flags*	Returns #hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue,

Returns

#hipErrorPeerAccessAlreadyEnabled if peer access is already enabled for this device.

4.7.2.4 hipMemcpyPeer()

```
hipError_t hipMemcpyPeer (
            void * dst,
            int dstDeviceId,
            const void * src,
            int srcDeviceId,
            size_t sizeBytes )
```

Copies memory from one device to memory on another device.

Parameters

out	*dst*	- Destination device pointer.
in	*dst↩ DeviceId*	- Destination device

Parameters

in	*src*	- Source device pointer
in	*src↩ DeviceId*	- Source device
in	*sizeBytes*	- Size of memory copy in bytes

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidDevice

4.7.2.5 hipMemcpyPeerAsync()

```
hipError_t hipMemcpyPeerAsync (
            void * dst,
            int dstDeviceId,
            const void * src,
            int srcDevice,
            size_t sizeBytes,
            hipStream_t stream  __dparm0 )
```

Copies memory from one device to memory on another device.

Parameters

out	*dst*	- Destination device pointer.
in	*dstDevice*	- Destination device
in	*src*	- Source device pointer
in	*srcDevice*	- Source device
in	*sizeBytes*	- Size of memory copy in bytes
in	*stream*	- Stream identifier

Returns

#hipSuccess, #hipErrorInvalidValue, #hipErrorInvalidDevice

4.7.2.6 hipMemGetAddressRange()

```
hipError_t hipMemGetAddressRange (
            hipDeviceptr_t * pbase,
            size_t * psize,
            hipDeviceptr_t dptr )
```

Get information on memory allocations.

Parameters

out	*pbase*	- BAse pointer address
out	*psize*	- Size of allocation
in	*dptr-*	Device Pointer

Returns

#hipSuccess, #hipErrorInvalidDevicePointer

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.8 Initialization and Version

Functions

- hipError_t hipInit (unsigned int flags)

  Explicitly initializes the HIP runtime.
- hipError_t hipDeviceGet (hipDevice_t *device, int ordinal)

  Returns a handle to a compute device.
- hipError_t hipDeviceComputeCapability (int *major, int *minor, hipDevice_t device)

  Returns the compute capability of the device.
- hipError_t hipDeviceGetName (char *name, int len, hipDevice_t device)

  Returns an identifer string for the device.
- hipError_t hipDeviceGetP2PAttribute (int *value, hipDeviceP2PAttr attr, int srcDevice, int dstDevice)

  Returns a value for attr of link between two devices.
- hipError_t hipDeviceGetPCIBusId (char *pciBusId, int len, int device)

  Returns a PCI Bus Id string for the device, overloaded to take int device ID.
- hipError_t hipDeviceGetByPCIBusId (int *device, const char *pciBusId)

  Returns a handle to a compute device.
- hipError_t hipDeviceTotalMem (size_t *bytes, hipDevice_t device)

  Returns the total amount of memory on the device.
- hipError_t hipDriverGetVersion (int *driverVersion)

  Returns the approximate HIP driver version.
- hipError_t hipRuntimeGetVersion (int *runtimeVersion)

  Returns the approximate HIP Runtime version.
- hipError_t hipModuleLoad (hipModule_t *module, const char *fname)

  Loads code object from file into a hipModule_t.
- hipError_t hipModuleUnload (hipModule_t module)

  Frees the module.
- hipError_t hipModuleGetFunction (hipFunction_t *function, hipModule_t module, const char *kname)

  Function with kname will be extracted if present in module.
- hipError_t hipFuncGetAttributes (struct hipFuncAttributes *attr, const void *func)

  Find out attributes for a given function.
- hipError_t hipFuncGetAttribute (int *value, hipFunction_attribute attrib, hipFunction_t hfunc)

  Find out a specific attribute for a given function.
- hipError_t **hipModuleGetTexRef** (textureReference **texRef, hipModule_t hmod, const char *name)
- hipError_t hipModuleLoadData (hipModule_t *module, const void *image)

  builds module from code object which resides in host memory. Image is pointer to that location.
- hipError_t hipModuleLoadDataEx (hipModule_t *module, const void *image, unsigned int numOptions, hipJitOption *options, void **optionValues)

  builds module from code object which resides in host memory. Image is pointer to that location. Options are not used. hipModuleLoadData is called.
- hipError_t hipModuleLaunchKernel (hipFunction_t f, unsigned int gridDimX, unsigned int gridDimY, unsigned int gridDimZ, unsigned int blockDimX, unsigned int blockDimY, unsigned int blockDimZ, unsigned int sharedMemBytes, hipStream_t stream, void **kernelParams, void **extra)

  launches kernel f with launch parameters and shared memory on stream with arguments passed to kernelparams or extra
- hipError_t hipModuleOccupancyMaxPotentialBlockSize (int *gridSize, int *blockSize, hipFunction_t f, size_t dynSharedMemPerBlk, int blockSizeLimit)

  determine the grid and block sizes to achieves maximum occupancy for a kernel
- hipError_t hipModuleOccupancyMaxPotentialBlockSizeWithFlags (int *gridSize, int *blockSize, hipFunction_t f, size_t dynSharedMemPerBlk, int blockSizeLimit, unsigned int flags)

  determine the grid and block sizes to achieves maximum occupancy for a kernel

- hipError_t hipModuleOccupancyMaxActiveBlocksPerMultiprocessor (int *numBlocks, hipFunction_t f, int blockSize, size_t dynSharedMemPerBlk)

  Returns occupancy for a device function.
- hipError_t hipModuleOccupancyMaxActiveBlocksPerMultiprocessorWithFlags (int *numBlocks, hipFunction_t f, int blockSize, size_t dynSharedMemPerBlk, unsigned int flags)

  Returns occupancy for a device function.
- hipError_t hipOccupancyMaxActiveBlocksPerMultiprocessor (int *numBlocks, const void *f, int blockSize, size_t dynSharedMemPerBlk)

  Returns occupancy for a device function.
- hipError_t hipOccupancyMaxActiveBlocksPerMultiprocessorWithFlags (int *numBlocks, const void *f, int blockSize, size_t dynSharedMemPerBlk, unsigned int flags __dparm(hipOccupancyDefault))

  Returns occupancy for a device function.
- hipError_t hipOccupancyMaxPotentialBlockSize (int *gridSize, int *blockSize, const void *f, size_t dynSharedMemPerBlk, int blockSizeLimit)

  determine the grid and block sizes to achieves maximum occupancy for a kernel
- hipError_t hipExtLaunchMultiKernelMultiDevice (hipLaunchParams *launchParamsList, int numDevices, unsigned int flags)

  Launches kernels on multiple devices and guarantees all specified kernels are dispatched on respective streams before enqueuing any other work on the specified streams from any other threads.
- hipError_t hipModuleGetGlobal (hipDeviceptr_t *dptr, size_t *bytes, hipModule_t hmod, const char *name)

  returns device memory pointer and size of the kernel present in the module with symbol `name`

4.8.1 Detailed Description

4.8.2 Function Documentation

4.8.2.1 hipDeviceComputeCapability()

```
hipError_t hipDeviceComputeCapability (
            int * major,
            int * minor,
            hipDevice_t device )
```

Returns the compute capability of the device.

Parameters

out	*major*	
out	*minor*	
in	*device*	

Returns

#hipSuccess, #hipErrorInavlidDevice

4.8.2.2 hipDeviceGet()

```
hipError_t hipDeviceGet (
            hipDevice_t * device,
            int ordinal )
```

Returns a handle to a compute device.

Parameters

out	*device*	

Parameters

in	*ordinal*	

Returns

#hipSuccess, #hipErrorInavlidDevice

4.8.2.3 hipDeviceGetByPCIBusId()

```
hipError_t hipDeviceGetByPCIBusId (
            int * device,
            const char * pciBusId )
```

Returns a handle to a compute device.

Parameters

out	*device*	handle
in	*PCI*	Bus ID

Returns

#hipSuccess, #hipErrorInavlidDevice, #hipErrorInvalidValue

4.8.2.4 hipDeviceGetName()

```
hipError_t hipDeviceGetName (
            char * name,
            int len,
            hipDevice_t device )
```

Returns an identifer string for the device.

Parameters

out	*name*	
in	*len*	
in	*device*	

Returns

#hipSuccess, #hipErrorInavlidDevice

4.8.2.5 hipDeviceGetP2PAttribute()

```
hipError_t hipDeviceGetP2PAttribute (
            int * value,
            hipDeviceP2PAttr attr,
            int srcDevice,
            int dstDevice )
```

Returns a value for attr of link between two devices.

Parameters

out	*value*	
in	*attr*	
in	*srcDevice*	
in	*dstDevice*	

Returns

#hipSuccess, #hipErrorInavlidDevice

4.8.2.6 hipDeviceGetPCIBusId()

```
hipError_t hipDeviceGetPCIBusId (
            char * pciBusId,
            int len,
            int device )
```

Returns a PCI Bus Id string for the device, overloaded to take int device ID.

Parameters

out	*pci↩ BusId*	
in	*len*	
in	*device*	

Returns

#hipSuccess, #hipErrorInavlidDevice

4.8.2.7 hipDeviceTotalMem()

```
hipError_t hipDeviceTotalMem (
            size_t * bytes,
            hipDevice_t device )
```

Returns the total amount of memory on the device.

Parameters

out	*bytes*	
in	*device*	

Returns

#hipSuccess, #hipErrorInavlidDevice

4.8.2.8 hipDriverGetVersion()

```
hipError_t hipDriverGetVersion (
            int * driverVersion )
```

Returns the approximate HIP driver version.

Parameters

out	*driverVersion*	

Returns

#hipSuccess, #hipErrorInavlidValue

Warning

The HIP feature set does not correspond to an exact CUDA SDK driver revision. This function always set *driverVersion to 4 as an approximation though HIP supports some features which were introduced in later CUDA SDK revisions. HIP apps code should not rely on the driver revision number here and should use arch feature flags to test device capabilities or conditional compilation.

See also

hipRuntimeGetVersion

4.8.2.9 hipExtLaunchMultiKernelMultiDevice()

```
hipError_t hipExtLaunchMultiKernelMultiDevice (
            hipLaunchParams * launchParamsList,
            int numDevices,
            unsigned int flags )
```

Launches kernels on multiple devices and guarantees all specified kernels are dispatched on respective streams before enqueuing any other work on the specified streams from any other threads.

Parameters

in	*hipLaunchParams*	List of launch parameters, one per device.
in	*numDevices*	Size of the launchParamsList array.
in	*flags*	Flags to control launch behavior.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

4.8.2.10 hipFuncGetAttribute()

```
hipError_t hipFuncGetAttribute (
            int * value,
            hipFunction_attribute attrib,
            hipFunction_t hfunc )
```

Find out a specific attribute for a given function.

Parameters

out	*value*	
in	*attrib*	
in	*hfunc*	

Returns

hipSuccess, hipErrorInvalidValue, hipErrorInvalidDeviceFunction

4.8.2.11 hipFuncGetAttributes()

```
hipError_t hipFuncGetAttributes (
            struct hipFuncAttributes * attr,
            const void * func )
```

Find out attributes for a given function.

Parameters

out	*attr*	
in	*func*	

Returns

hipSuccess, hipErrorInvalidValue, hipErrorInvalidDeviceFunction

4.8.2.12 hipInit()

```
hipError_t hipInit (
            unsigned int flags )
```

Explicitly initializes the HIP runtime.
Most HIP APIs implicitly initialize the HIP runtime. This API provides control over the timing of the initialization.

4.8.2.13 hipModuleGetFunction()

```
hipError_t hipModuleGetFunction (
            hipFunction_t * function,
            hipModule_t module,
            const char * kname )
```

Function with kname will be extracted if present in module.

Parameters

in	*module*	
in	*kname*	
out	*function*	

Returns

hipSuccess, hipErrorInvalidValue, hipErrorInvalidContext, hipErrorNotInitialized, hipErrorNotFound,

4.8.2.14 hipModuleGetGlobal()

```
hipError_t hipModuleGetGlobal (
            hipDeviceptr_t * dptr,
            size_t * bytes,
            hipModule_t hmod,
            const char * name )
```

returns device memory pointer and size of the kernel present in the module with symbol `name`

Parameters

out	*dptr*	
out	*bytes*	
in	*hmod*	
in	*name*	

Returns

hipSuccess, hipErrorInvalidValue, hipErrorNotInitialized

4.8.2.15 hipModuleLaunchKernel()

```
hipError_t hipModuleLaunchKernel (
            hipFunction_t f,
            unsigned int gridDimX,
            unsigned int gridDimY,
            unsigned int gridDimZ,
            unsigned int blockDimX,
            unsigned int blockDimY,
            unsigned int blockDimZ,
            unsigned int sharedMemBytes,
            hipStream_t stream,
            void ** kernelParams,
            void ** extra )
```

launches kernel f with launch parameters and shared memory on stream with arguments passed to kernelparams or extra

Parameters

in	*f*	Kernel to launch.
in	*gridDimX*	X grid dimension specified as multiple of blockDimX.
in	*gridDimY*	Y grid dimension specified as multiple of blockDimY.
in	*gridDimZ*	Z grid dimension specified as multiple of blockDimZ.
in	*blockDimX*	X block dimensions specified in work-items
in	*blockDimY*	Y grid dimension specified in work-items
in	*blockDimZ*	Z grid dimension specified in work-items
in	*sharedMemBytes*	Amount of dynamic shared memory to allocate for this kernel. The kernel can access this with HIP_DYNAMIC_SHARED.
in	*stream*	Stream where the kernel should be dispatched. May be 0, in which case th default stream is used with associated synchronization rules.
in	*kernelParams*	
in	*extra*	Pointer to kernel arguments. These are passed directly to the kernel and must be in the memory layout and alignment expected by the kernel.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

Warning

kernellParams argument is not yet implemented in HIP. Please use extra instead. Please refer to hip_porting↩ _driver_api.md for sample usage.

4.8.2.16 hipModuleLoad()

```
hipError_t hipModuleLoad (
            hipModule_t * module,
            const char * fname )
```

Loads code object from file into a hipModule_t.

Parameters

in	*fname*	
out	*module*	

Returns

hipSuccess, hipErrorInvalidValue, hipErrorInvalidContext, hipErrorFileNotFound, hipErrorOutOfMemory, hip↩ ErrorSharedObjectInitFailed, hipErrorNotInitialized

4.8.2.17 hipModuleLoadData()

```
hipError_t hipModuleLoadData (
            hipModule_t * module,
            const void * image )
```

builds module from code object which resides in host memory. Image is pointer to that location.

Parameters

in	*image*	
out	*module*	

Returns

hipSuccess, hipErrorNotInitialized, hipErrorOutOfMemory, hipErrorNotInitialized

4.8.2.18 hipModuleLoadDataEx()

```
hipError_t hipModuleLoadDataEx (
            hipModule_t * module,
            const void * image,
            unsigned int numOptions,
            hipJitOption * options,
            void ** optionValues )
```

builds module from code object which resides in host memory. Image is pointer to that location. Options are not used. hipModuleLoadData is called.

Parameters

in	*image*	
out	*module*	
in	*number*	of options
in	*options*	for JIT
in	*option*	values for JIT

Returns

hipSuccess, hipErrorNotInitialized, hipErrorOutOfMemory, hipErrorNotInitialized

4.8.2.19 hipModuleOccupancyMaxActiveBlocksPerMultiprocessor()

```
hipError_t hipModuleOccupancyMaxActiveBlocksPerMultiprocessor (
            int * numBlocks,
            hipFunction_t f,
            int blockSize,
            size_t dynSharedMemPerBlk )
```

Returns occupancy for a device function.

Parameters

out	*numBlocks*	Returned occupancy
in	*func*	Kernel function (hipFunction) for which occupancy is calulated
in	*blockSize*	Block size the kernel is intended to be launched with
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block

4.8.2.20 hipModuleOccupancyMaxActiveBlocksPerMultiprocessorWithFlags()

```
hipError_t hipModuleOccupancyMaxActiveBlocksPerMultiprocessorWithFlags (
            int * numBlocks,
            hipFunction_t f,
            int blockSize,
            size_t dynSharedMemPerBlk,
            unsigned int flags )
```

Returns occupancy for a device function.

Parameters

out	*numBlocks*	Returned occupancy
in	*f*	Kernel function(hipFunction_t) for which occupancy is calulated
in	*blockSize*	Block size the kernel is intended to be launched with
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block
in	*flags*	Extra flags for occupancy calculation (only default supported)

4.8.2.21 hipModuleOccupancyMaxPotentialBlockSize()

```
hipError_t hipModuleOccupancyMaxPotentialBlockSize (
            int * gridSize,
            int * blockSize,
            hipFunction_t f,
            size_t dynSharedMemPerBlk,
            int blockSizeLimit )
```

determine the grid and block sizes to achieves maximum occupancy for a kernel

Parameters

out	*gridSize*	minimum grid size for maximum potential occupancy
out	*blockSize*	block size for maximum potential occupancy

Parameters

in	*f*	kernel function for which occupancy is calulated
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block
in	*blockSizeLimit*	the maximum block size for the kernel, use 0 for no limit

Returns

hipSuccess, hipInvalidDevice, hipErrorInvalidValue

4.8.2.22 hipModuleOccupancyMaxPotentialBlockSizeWithFlags()

```
hipError_t hipModuleOccupancyMaxPotentialBlockSizeWithFlags (
            int * gridSize,
            int * blockSize,
            hipFunction_t f,
            size_t dynSharedMemPerBlk,
            int blockSizeLimit,
            unsigned int flags )
```

determine the grid and block sizes to achieves maximum occupancy for a kernel

Parameters

out	*gridSize*	minimum grid size for maximum potential occupancy
out	*blockSize*	block size for maximum potential occupancy
in	*f*	kernel function for which occupancy is calulated
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block
in	*blockSizeLimit*	the maximum block size for the kernel, use 0 for no limit
in	*flags*	Extra flags for occupancy calculation (only default supported)

Returns

hipSuccess, hipInvalidDevice, hipErrorInvalidValue

4.8.2.23 hipModuleUnload()

```
hipError_t hipModuleUnload (
            hipModule_t module )
```

Frees the module.

Parameters

in	*module*	

Returns

hipSuccess, hipInvalidValue module is freed and the code objects associated with it are destroyed

4.8.2.24 hipOccupancyMaxActiveBlocksPerMultiprocessor()

```
hipError_t hipOccupancyMaxActiveBlocksPerMultiprocessor (
            int * numBlocks,
```

```
            const void * f,
            int blockSize,
            size_t dynSharedMemPerBlk )
```

Returns occupancy for a device function.

Parameters

out	*numBlocks*	Returned occupancy
in	*func*	Kernel function for which occupancy is calulated
in	*blockSize*	Block size the kernel is intended to be launched with
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block

4.8.2.25 hipOccupancyMaxActiveBlocksPerMultiprocessorWithFlags()

```
hipError_t hipOccupancyMaxActiveBlocksPerMultiprocessorWithFlags (
            int * numBlocks,
            const void * f,
            int blockSize,
            size_t dynSharedMemPerBlk,
            unsigned int flags  __dparmhipOccupancyDefault )
```

Returns occupancy for a device function.

Parameters

out	*numBlocks*	Returned occupancy
in	*f*	Kernel function for which occupancy is calulated
in	*blockSize*	Block size the kernel is intended to be launched with
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block
in	*flags*	Extra flags for occupancy calculation (currently ignored)

4.8.2.26 hipOccupancyMaxPotentialBlockSize()

```
hipError_t hipOccupancyMaxPotentialBlockSize (
            int * gridSize,
            int * blockSize,
            const void * f,
            size_t dynSharedMemPerBlk,
            int blockSizeLimit )
```

determine the grid and block sizes to achieves maximum occupancy for a kernel

Parameters

out	*gridSize*	minimum grid size for maximum potential occupancy
out	*blockSize*	block size for maximum potential occupancy
in	*f*	kernel function for which occupancy is calulated
in	*dynSharedMemPerBlk*	dynamic shared memory usage (in bytes) intended for each block
in	*blockSizeLimit*	the maximum block size for the kernel, use 0 for no limit

Returns

hipSuccess, hipInvalidDevice, hipErrorInvalidValue

4.8.2.27 hipRuntimeGetVersion()

```
hipError_t hipRuntimeGetVersion (
            int * runtimeVersion )
```

Returns the approximate HIP Runtime version.

Parameters

out	*runtimeVersion*	

Returns

#hipSuccess, #hipErrorInavlidValue

Warning

On HIP/HCC path this function returns HIP runtime patch version however on HIP/NVCC path this function return CUDA runtime version.

See also

hipDriverGetVersion

4.9 Context Management

Functions

- hipError_t hipCtxCreate (hipCtx_t ∗ctx, unsigned int flags, hipDevice_t device)

  Create a context and set it as current/ default context.
- hipError_t hipCtxDestroy (hipCtx_t ctx)

  Destroy a HIP context.
- hipError_t hipCtxPopCurrent (hipCtx_t ∗ctx)

  Pop the current/default context and return the popped context.
- hipError_t hipCtxPushCurrent (hipCtx_t ctx)

  Push the context to be set as current/ default context.
- hipError_t hipCtxSetCurrent (hipCtx_t ctx)

  Set the passed context as current/default.
- hipError_t hipCtxGetCurrent (hipCtx_t ∗ctx)

  Get the handle of the current/ default context.
- hipError_t hipCtxGetDevice (hipDevice_t ∗device)

  Get the handle of the device associated with current/default context.
- hipError_t hipCtxGetApiVersion (hipCtx_t ctx, int ∗apiVersion)

  Returns the approximate HIP api version.
- hipError_t hipCtxGetCacheConfig (hipFuncCache_t ∗cacheConfig)

  Set Cache configuration for a specific function.
- hipError_t hipCtxSetCacheConfig (hipFuncCache_t cacheConfig)

  Set L1/Shared cache partition.
- hipError_t hipCtxSetSharedMemConfig (hipSharedMemConfig config)

  Set Shared memory bank configuration.
- hipError_t hipCtxGetSharedMemConfig (hipSharedMemConfig ∗pConfig)

  Get Shared memory bank configuration.
- hipError_t hipCtxSynchronize (void)

  Blocks until the default context has completed all preceding requested tasks.
- hipError_t hipCtxGetFlags (unsigned int ∗flags)

  Return flags used for creating default context.
- hipError_t hipCtxEnablePeerAccess (hipCtx_t peerCtx, unsigned int flags)

  Enables direct access to memory allocations in a peer context.
- hipError_t hipCtxDisablePeerAccess (hipCtx_t peerCtx)

  Disable direct access from current context's virtual address space to memory allocations physically located on a peer context.Disables direct access to memory allocations in a peer context and unregisters any registered allocations.
- hipError_t hipDevicePrimaryCtxGetState (hipDevice_t dev, unsigned int ∗flags, int ∗active)

  Get the state of the primary context.
- hipError_t hipDevicePrimaryCtxRelease (hipDevice_t dev)

  Release the primary context on the GPU.
- hipError_t hipDevicePrimaryCtxRetain (hipCtx_t ∗pctx, hipDevice_t dev)

  Retain the primary context on the GPU.
- hipError_t hipDevicePrimaryCtxReset (hipDevice_t dev)

  Resets the primary context on the GPU.
- hipError_t hipDevicePrimaryCtxSetFlags (hipDevice_t dev, unsigned int flags)

  Set flags for the primary context.

4.9.1 Detailed Description

4.9.2 Function Documentation

4.9.2.1 hipCtxCreate()

```
hipError_t hipCtxCreate (
            hipCtx_t * ctx,
            unsigned int flags,
            hipDevice_t device )
```

Create a context and set it as current/ default context.

Parameters

out	*ctx*	
in	*flags*	
in	*associated*	device handle

Returns

#hipSuccess

See also

hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.2 hipCtxDestroy()

```
hipError_t hipCtxDestroy (
            hipCtx_t ctx )
```

Destroy a HIP context.

Parameters

in	*ctx*	Context to destroy

Returns

#hipSuccess, #hipErrorInvalidValue

See also

hipCtxCreate, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent,hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize , hipCtxGetDevice

4.9.2.3 hipCtxDisablePeerAccess()

```
hipError_t hipCtxDisablePeerAccess (
            hipCtx_t peerCtx )
```

Disable direct access from current context's virtual address space to memory allocations physically located on a peer context.Disables direct access to memory allocations in a peer context and unregisters any registered allocations.

Returns hipErrorPeerAccessNotEnabled if direct access to memory on peerDevice has not yet been enabled from the current device.

Parameters

in	*peerCtx*	

Returns

#hipSuccess, #hipErrorPeerAccessNotEnabled

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

Warning

PeerToPeer support is experimental.

4.9.2.4 hipCtxEnablePeerAccess()

```
hipError_t hipCtxEnablePeerAccess (
            hipCtx_t peerCtx,
            unsigned int flags )
```

Enables direct access to memory allocations in a peer context.
Memory which already allocated on peer device will be mapped into the address space of the current device. In addition, all future memory allocations on peerDeviceId will be mapped into the address space of the current device when the memory is allocated. The peer memory remains accessible from the current device until a call to hip↩DeviceDisablePeerAccess or hipDeviceReset.

Parameters

in	*peerCtx*	
in	*flags*	

Returns

#hipSuccess, #hipErrorInvalidDevice, #hipErrorInvalidValue, #hipErrorPeerAccessAlreadyEnabled

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

Warning

PeerToPeer support is experimental.

4.9.2.5 hipCtxGetApiVersion()

```
hipError_t hipCtxGetApiVersion (
            hipCtx_t ctx,
            int * apiVersion )
```

Returns the approximate HIP api version.

Parameters

in	*ctx*	Context to check
out	*apiVersion*	

Returns

#hipSuccess

Warning

The HIP feature set does not correspond to an exact CUDA SDK api revision. This function always set *api↩ Version to 4 as an approximation though HIP supports some features which were introduced in later CUDA SDK revisions. HIP apps code should not rely on the api revision number here and should use arch feature flags to test device capabilities or conditional compilation.

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetDevice, hipCtxGetFlags, hipCtxPopCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.6 hipCtxGetCacheConfig()

```
hipError_t hipCtxGetCacheConfig (
             hipFuncCache_t * cacheConfig )
```

Set Cache configuration for a specific function.

Parameters

out	*cacheConfiguration*	

Returns

#hipSuccess

Warning

AMD devices and some Nvidia GPUS do not support reconfigurable cache. This hint is ignored on those architectures.

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.7 hipCtxGetCurrent()

```
hipError_t hipCtxGetCurrent (
             hipCtx_t * ctx )
```

Get the handle of the current/ default context.

Parameters

out	*ctx*	

Returns

#hipSuccess, #hipErrorInvalidContext

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetDevice, hipCtxGetFlags, hipCtxPopCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.8 hipCtxGetDevice()

```
hipError_t hipCtxGetDevice (
            hipDevice_t * device )
```

Get the handle of the device associated with current/default context.

Parameters

out	*device*	

Returns

#hipSuccess, #hipErrorInvalidContext

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize

4.9.2.9 hipCtxGetFlags()

```
hipError_t hipCtxGetFlags (
            unsigned int * flags )
```

Return flags used for creating default context.

Parameters

out	*flags*	

Returns

#hipSuccess

See also

hipCtxCreate, hipCtxDestroy, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.10 hipCtxGetSharedMemConfig()

```
hipError_t hipCtxGetSharedMemConfig (
            hipSharedMemConfig * pConfig )
```

Get Shared memory bank configuration.

Parameters

out	*sharedMemoryConfiguration*	

Returns

#hipSuccess

Warning

AMD devices and some Nvidia GPUS do not support shared cache banking, and the hint is ignored on those architectures.

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.11 hipCtxPopCurrent()

```
hipError_t hipCtxPopCurrent (
            hipCtx_t * ctx )
```

Pop the current/default context and return the popped context.

Parameters

out	*ctx*	

Returns

#hipSuccess, #hipErrorInvalidContext

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxSetCurrent, hipCtxGetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.12 hipCtxPushCurrent()

```
hipError_t hipCtxPushCurrent (
            hipCtx_t ctx )
```

Push the context to be set as current/ default context.

Parameters

in	*ctx*	

Returns

#hipSuccess, #hipErrorInvalidContext

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize , hipCtxGetDevice

4.9.2.13 hipCtxSetCacheConfig()

```
hipError_t hipCtxSetCacheConfig (
            hipFuncCache_t cacheConfig )
```

Set L1/Shared cache partition.

Parameters

in	*cacheConfiguration*	

Returns

#hipSuccess

Warning

AMD devices and some Nvidia GPUS do not support reconfigurable cache. This hint is ignored on those architectures.

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.14 hipCtxSetCurrent()

```
hipError_t hipCtxSetCurrent (
            hipCtx_t ctx )
```

Set the passed context as current/default.

Parameters

in	*ctx*	

Returns

#hipSuccess, #hipErrorInvalidContext

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize , hipCtxGetDevice

4.9.2.15 hipCtxSetSharedMemConfig()

```
hipError_t hipCtxSetSharedMemConfig (
            hipSharedMemConfig config )
```

Set Shared memory bank configuration.

Parameters

in	*sharedMemoryConfiguration*	

Returns

#hipSuccess

Warning

AMD devices and some Nvidia GPUS do not support shared cache banking, and the hint is ignored on those architectures.

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.16 hipCtxSynchronize()

```
hipError_t hipCtxSynchronize (
            void  )
```

Blocks until the default context has completed all preceding requested tasks.

Returns

#hipSuccess

Warning

This function waits for all streams on the default context to complete execution, and then returns.

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxGetDevice

4.9.2.17 hipDevicePrimaryCtxGetState()

```
hipError_t hipDevicePrimaryCtxGetState (
            hipDevice_t dev,
            unsigned int * flags,
            int * active )
```

Get the state of the primary context.

Parameters

in	*Device*	to get primary context flags for
out	*Pointer*	to store flags
out	*Pointer*	to store context state; 0 = inactive, 1 = active

Returns

#hipSuccess

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.18 hipDevicePrimaryCtxRelease()

```
hipError_t hipDevicePrimaryCtxRelease (
            hipDevice_t dev )
```

Release the primary context on the GPU.

Parameters

in	*Device*	which primary context is released

Returns

#hipSuccess

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

Warning

This function return #hipSuccess though doesn't release the primaryCtx by design on HIP/HCC path.

4.9.2.19 hipDevicePrimaryCtxReset()

```
hipError_t hipDevicePrimaryCtxReset (
            hipDevice_t dev )
```

Resets the primary context on the GPU.

Parameters

in	*Device*	which primary context is reset

Returns

#hipSuccess

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.20 hipDevicePrimaryCtxRetain()

```
hipError_t hipDevicePrimaryCtxRetain (
            hipCtx_t * pctx,
            hipDevice_t dev )
```

Retain the primary context on the GPU.

Parameters

out	*Returned*	context handle of the new context
in	*Device*	which primary context is released

Returns

#hipSuccess

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.9.2.21 hipDevicePrimaryCtxSetFlags()

```
hipError_t hipDevicePrimaryCtxSetFlags (
            hipDevice_t dev,
            unsigned int flags )
```

Set flags for the primary context.

Parameters

in	*Device*	for which the primary context flags are set
in	*New*	flags for the device

Returns

#hipSuccess, #hipErrorContextAlreadyInUse

See also

hipCtxCreate, hipCtxDestroy, hipCtxGetFlags, hipCtxPopCurrent, hipCtxGetCurrent, hipCtxSetCurrent, hipCtxPushCurrent, hipCtxSetCacheConfig, hipCtxSynchronize, hipCtxGetDevice

4.10 Control

Functions

- hipError_t hipProfilerStart ()

  Start recording of profiling information When using this API, start the profiler with profiling disabled. (–startdisabled)
- hipError_t hipProfilerStop ()

  Stop recording of profiling information. When using this API, start the profiler with profiling disabled. (–startdisabled)

4.10.1 Detailed Description

Warning

The cudaProfilerInitialize API format for "configFile" is not supported.

4.10.2 Function Documentation

4.10.2.1 hipProfilerStart()

`hipError_t hipProfilerStart ( )`

Start recording of profiling information When using this API, start the profiler with profiling disabled. (–startdisabled)

Warning

: hipProfilerStart API is under development.

4.10.2.2 hipProfilerStop()

`hipError_t hipProfilerStop ( )`

Stop recording of profiling information. When using this API, start the profiler with profiling disabled. (–startdisabled)

Warning

: hipProfilerStop API is under development.

4.11 Launch API to support the triple-chevron syntax

Functions

- hipError_t hipConfigureCall (dim3 gridDim, dim3 blockDim, size_t sharedMem __dparm(0), hipStream_t stream __dparm(0))

  Configure a kernel launch.
- hipError_t hipSetupArgument (const void *arg, size_t size, size_t offset)

  Set a kernel argument.
- hipError_t hipLaunchByPtr (const void *func)

  Launch a kernel.
- hipError_t __hipPushCallConfiguration (dim3 gridDim, dim3 blockDim, size_t sharedMem __dparm(0), hipStream_t stream __dparm(0))

  Push configuration of a kernel launch.
- hipError_t __hipPopCallConfiguration (dim3 *gridDim, dim3 *blockDim, size_t *sharedMem, hipStream_t *stream)

  Pop configuration of a kernel launch.
- hipError_t hipLaunchKernel (const void *function_address, dim3 numBlocks, dim3 dimBlocks, void **args, size_t sharedMemBytes __dparm(0), hipStream_t stream __dparm(0))

  C compliant kernel launch API.
- hipError_t hipMemPrefetchAsync (const void *dev_ptr, size_t count, int device, hipStream_t stream __dparm(0))

  Prefetches memory to the specified destination device using AMD HMM.
- hipError_t hipMemAdvise (const void *dev_ptr, size_t count, hipMemoryAdvise advice, int device)

  Advise about the usage of a given memory range to AMD HMM.
- hipError_t hipMemRangeGetAttribute (void *data, size_t data_size, hipMemRangeAttribute attribute, const void *dev_ptr, size_t count)

  Query an attribute of a given memory range in AMD HMM.
- hipError_t hipMemRangeGetAttributes (void **data, size_t *data_sizes, hipMemRangeAttribute *attributes, size_t num_attributes, const void *dev_ptr, size_t count)

  Query attributes of a given memory range in AMD HMM.
- hipError_t hipStreamAttachMemAsync (hipStream_t stream, hipDeviceptr_t *dev_ptr, size_t length __dparm(0), unsigned int flags __dparm(hipMemAttachSingle))

  Attach memory to a stream asynchronously in AMD HMM.
- hipError_t **hipExtLaunchKernel** (const void *function_address, dim3 numBlocks, dim3 dimBlocks, void **args, size_t sharedMemBytes, hipStream_t stream, hipEvent_t startEvent, hipEvent_t stopEvent, int flags)
- hipError_t **hipBindTexture** (size_t *offset, const textureReference *tex, const void *devPtr, const hipChannelFormatDesc *desc, size_t size __dparm(UINT_MAX))
- hipError_t **hipBindTexture2D** (size_t *offset, const textureReference *tex, const void *devPtr, const hipChannelFormatDesc *desc, size_t width, size_t height, size_t pitch)

4.11.1 Detailed Description

4.11.2 Function Documentation

4.11.2.1 __hipPopCallConfiguration()

```
hipError_t __hipPopCallConfiguration (
            dim3 * gridDim,
            dim3 * blockDim,
            size_t * sharedMem,
            hipStream_t * stream )
```

Pop configuration of a kernel launch.

Parameters

out	*gridDim*	grid dimension specified as multiple of blockDim.
out	*blockDim*	block dimensions specified in work-items
out	*sharedMem*	Amount of dynamic shared memory to allocate for this kernel. The kernel can access this with HIP_DYNAMIC_SHARED.
out	*stream*	Stream where the kernel should be dispatched. May be 0, in which case the default stream is used with associated synchronization rules.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

4.11.2.2 __hipPushCallConfiguration()

```
hipError_t __hipPushCallConfiguration (
            dim3 gridDim,
            dim3 blockDim,
            size_t sharedMem  __dparm0,
            hipStream_t stream  __dparm0 )
```

Push configuration of a kernel launch.

Parameters

in	*gridDim*	grid dimension specified as multiple of blockDim.
in	*blockDim*	block dimensions specified in work-items
in	*sharedMem*	Amount of dynamic shared memory to allocate for this kernel. The kernel can access this with HIP_DYNAMIC_SHARED.
in	*stream*	Stream where the kernel should be dispatched. May be 0, in which case the default stream is used with associated synchronization rules.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

4.11.2.3 hipConfigureCall()

```
hipError_t hipConfigureCall (
            dim3 gridDim,
            dim3 blockDim,
            size_t sharedMem  __dparm0,
            hipStream_t stream  __dparm0 )
```

Configure a kernel launch.

Parameters

in	*gridDim*	grid dimension specified as multiple of blockDim.
in	*blockDim*	block dimensions specified in work-items
in	*sharedMem*	Amount of dynamic shared memory to allocate for this kernel. The kernel can access this with HIP_DYNAMIC_SHARED.
in	*stream*	Stream where the kernel should be dispatched. May be 0, in which case the default stream is used with associated synchronization rules.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

4.11.2.4 hipLaunchByPtr()

```
hipError_t hipLaunchByPtr (
             const void * func )
```

Launch a kernel.

Parameters

in	*func*	Kernel to launch.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

4.11.2.5 hipLaunchKernel()

```
hipError_t hipLaunchKernel (
             const void * function_address,
             dim3 numBlocks,
             dim3 dimBlocks,
             void ** args,
             size_t sharedMemBytes  __dparm0,
             hipStream_t stream  __dparm0 )
```

C compliant kernel launch API.

Parameters

in	*function_address*	- kernel stub function pointer.
in	*numBlocks*	- number of blocks
in	*dimBlocks*	- dimension of a block
in	*args*	- kernel arguments
in	*sharedMemBytes*	- Amount of dynamic shared memory to allocate for this kernel. The Kernel can access this with HIP_DYNAMIC_SHARED.
in	*stream*	- Stream where the kernel should be dispatched. May be 0, in which case th default stream is used with associated synchronization rules.

Returns

#hipSuccess, #hipErrorInvalidValue, hipInvalidDevice

4.11.2.6 hipMemAdvise()

```
hipError_t hipMemAdvise (
            const void * dev_ptr,
            size_t count,
            hipMemoryAdvise advice,
            int device )
```

Advise about the usage of a given memory range to AMD HMM.

Parameters

in	*dev_ptr*	pointer to memory to set the advice for
in	*count*	size in bytes of the memory range
in	*advice*	advice to be applied for the specified memory range
in	*device*	device to apply the advice for

Returns

#hipSuccess, #hipErrorInvalidValue

4.11.2.7 hipMemPrefetchAsync()

```
hipError_t hipMemPrefetchAsync (
            const void * dev_ptr,
            size_t count,
            int device,
            hipStream_t stream __dparm0 )
```

Prefetches memory to the specified destination device using AMD HMM.

Parameters

in	*dev_ptr*	pointer to be prefetched
in	*count*	size in bytes for prefetching
in	*device*	destination device to prefetch to
in	*stream*	stream to enqueue prefetch operation

Returns

#hipSuccess, #hipErrorInvalidValue

4.11.2.8 hipMemRangeGetAttribute()

```
hipError_t hipMemRangeGetAttribute (
            void * data,
            size_t data_size,
            hipMemRangeAttribute attribute,
            const void * dev_ptr,
            size_t count )
```

Query an attribute of a given memory range in AMD HMM.

Parameters

	[in/out]	data a pointer to a memory location where the result of each attribute query will be written to
in	*data_size*	the size of data

Parameters

in	*attribute*	the attribute to query
in	*dev_ptr*	start of the range to query
in	*count*	size of the range to query

Returns

#hipSuccess, #hipErrorInvalidValue

4.11.2.9 hipMemRangeGetAttributes()

```
hipError_t hipMemRangeGetAttributes (
            void ** data,
            size_t * data_sizes,
            hipMemRangeAttribute * attributes,
            size_t num_attributes,
            const void * dev_ptr,
            size_t count )
```

Query attributes of a given memory range in AMD HMM.

Parameters

	[in/out]	data a two-dimensional array containing pointers to memory locations where the result of each attribute query will be written to
in	*data_sizes*	an array, containing the sizes of each result
in	*attributes*	the attribute to query
in	*num_attributes*	an array of attributes to query (numAttributes and the number of attributes in this array should match)
in	*dev_ptr*	start of the range to query
in	*count*	size of the range to query

Returns

#hipSuccess, #hipErrorInvalidValue

4.11.2.10 hipSetupArgument()

```
hipError_t hipSetupArgument (
            const void * arg,
            size_t size,
            size_t offset )
```

Set a kernel argument.

Returns

hipSuccess, hipInvalidDevice, hipErrorNotInitialized, hipErrorInvalidValue

Parameters

in	*arg*	Pointer the argument in host memory.
in	*size*	Size of the argument.
in	*offset*	Offset of the argument on the argument stack.

4.11.2.11 hipStreamAttachMemAsync()

```
hipError_t hipStreamAttachMemAsync (
            hipStream_t stream,
            hipDeviceptr_t * dev_ptr,
            size_t length  __dparm0,
            unsigned int flags  __dparmhipMemAttachSingle )
```

Attach memory to a stream asynchronously in AMD HMM.

Parameters

in	*stream*	- stream in which to enqueue the attach operation
in	*dev_ptr*	- pointer to memory (must be a pointer to managed memory or to a valid host-accessible region of system-allocated memory)
in	*length*	- length of memory (defaults to zero)
in	*flags*	- must be one of cudaMemAttachGlobal, cudaMemAttachHost or cudaMemAttachSingle (defaults to cudaMemAttachSingle)

Returns

#hipSuccess, #hipErrorInvalidValue

4.12 Global enum and defines

Classes

- struct dim3
- struct hipLaunchParams_t

Macros

- #define hipStreamDefault 0x00

  Flags that can be used with hipStreamCreateWithFlags.
- #define hipStreamNonBlocking 0x01

  Stream does not implicitly synchronize with null stream.
- #define hipEventDefault 0x0

  Flags that can be used with hipEventCreateWithFlags:
- #define hipEventBlockingSync 0x1

  Waiting will yield CPU. Power-friendly and usage-friendly but may increase latency.
- #define hipEventDisableTiming 0x2

  Disable event's capability to record timing information. May improve performance.
- #define hipEventInterprocess 0x4

  Event can support IPC.
- #define **hipEventReleaseToDevice** 0x40000000
- #define hipEventReleaseToSystem 0x80000000
- #define hipHostMallocDefault 0x0

  Flags that can be used with hipHostMalloc.
- #define hipHostMallocPortable 0x1

  Memory is considered allocated by all contexts.
- #define hipHostMallocMapped 0x2

  can be obtained with hipHostGetDevicePointer.
- #define **hipHostMallocWriteCombined** 0x4
- #define hipHostMallocNumaUser 0x20000000

  Host memory allocation will follow numa policy set by user.
- #define hipHostMallocCoherent 0x40000000

  allocation.
- #define hipHostMallocNonCoherent 0x80000000

  allocation.
- #define hipMemAttachGlobal 0x01

  Memory can be accessed by any stream on any device.
- #define hipMemAttachHost 0x02

  Memory cannot be accessed by any stream on any device.
- #define hipMemAttachSingle 0x04

  the associated device
- #define **hipDeviceMallocDefault** 0x0
- #define hipDeviceMallocFinegrained 0x1

  Memory is allocated in fine grained region of device.
- #define hipHostRegisterDefault 0x0

  Flags that can be used with hipHostRegister.
- #define hipHostRegisterPortable 0x1

  Memory is considered registered by all contexts.
- #define hipHostRegisterMapped 0x2

  can be obtained with hipHostGetDevicePointer.
- #define hipHostRegisterIoMemory 0x4

Not supported.

- #define hipExtHostRegisterCoarseGrained 0x8

  Coarse Grained host memory lock.
- #define hipDeviceScheduleAuto 0x0

  Automatically select between Spin and Yield.
- #define hipDeviceScheduleSpin 0x1

  may consume more power.
- #define hipDeviceScheduleYield 0x2

  power and is friendlier to other threads in the system.
- #define **hipDeviceScheduleBlockingSync** 0x4
- #define **hipDeviceScheduleMask** 0x7
- #define **hipDeviceMapHost** 0x8
- #define **hipDeviceLmemResizeToMax** 0x16
- #define hipArrayDefault 0x00

  Default HIP array allocation flag.
- #define **hipArrayLayered** 0x01
- #define **hipArraySurfaceLoadStore** 0x02
- #define **hipArrayCubemap** 0x04
- #define **hipArrayTextureGather** 0x08
- #define **hipOccupancyDefault** 0x00
- #define **hipCooperativeLaunchMultiDeviceNoPreSync** 0x01
- #define **hipCooperativeLaunchMultiDeviceNoPostSync** 0x02
- #define **hipCpuDeviceId** ((int)-1)
- #define **hipInvalidDeviceId** ((int)-2)
- #define hipExtAnyOrderLaunch 0x01

  AnyOrderLaunch of kernels.
- #define **__HIP_NODISCARD**

4.12.1 Detailed Description

4.12.2 Macro Definition Documentation

4.12.2.1 hipDeviceScheduleSpin

```
#define hipDeviceScheduleSpin  0x1
```

may consume more power.
Dedicate a CPU core to spin-wait. Provides lowest latency, but burns a CPU core and

4.12.2.2 hipDeviceScheduleYield

```
#define hipDeviceScheduleYield  0x2
```

power and is friendlier to other threads in the system.
Yield the CPU to the operating system when waiting. May increase latency, but lowers

4.12.2.3 hipEventDefault

```
#define hipEventDefault 0x0
```
Flags that can be used with hipEventCreateWithFlags:
Default flags

4.12.2.4 hipEventInterprocess

```
#define hipEventInterprocess 0x4
```
Event can support IPC.

Warning

- not supported in HIP.

4.12.2.5 hipEventReleaseToSystem

```
#define hipEventReleaseToSystem  0x80000000
```
< Use a device-scope release when recording this event. This flag is useful to obtain more precise timings of commands between events. The flag is a no-op on CUDA platforms.

4.12.2.6 hipHostMallocCoherent

```
#define hipHostMallocCoherent  0x40000000
```
allocation.
Allocate coherent memory. Overrides HIP_COHERENT_HOST_ALLOC for specific

4.12.2.7 hipHostMallocDefault

```
#define hipHostMallocDefault 0x0
```
Flags that can be used with hipHostMalloc.
< Use a system-scope release that when recording this event. This flag is useful to make non-coherent host memory visible to the host. The flag is a no-op on CUDA platforms.

4.12.2.8 hipHostMallocMapped

```
#define hipHostMallocMapped  0x2
```
can be obtained with hipHostGetDevicePointer.
Map the allocation into the address space for the current device. The device pointer

4.12.2.9 hipHostMallocNonCoherent

```
#define hipHostMallocNonCoherent  0x80000000
```
allocation.
Allocate non-coherent memory. Overrides HIP_COHERENT_HOST_ALLOC for specific

4.12.2.10 hipHostRegisterDefault

```
#define hipHostRegisterDefault 0x0
```
Flags that can be used with hipHostRegister.
Memory is Mapped and Portable

4.12.2.11 hipHostRegisterMapped

```
#define hipHostRegisterMapped  0x2
```
can be obtained with hipHostGetDevicePointer.
Map the allocation into the address space for the current device. The device pointer

4.12.2.12 hipMemAttachSingle

```
#define hipMemAttachSingle 0x04
```

the associated device
Memory can only be accessed by a single stream on

4.12.2.13 hipStreamDefault

```
#define hipStreamDefault  0x00
```

Flags that can be used with hipStreamCreateWithFlags.
Default stream creation flags. These are used with hipStreamCreate().

4.12.3 Typedef Documentation

4.12.3.1 dim3

```
typedef struct dim3 dim3
```

Struct for data in 3D

4.12.3.2 hipFuncAttribute

```
typedef enum hipFuncAttribute hipFuncAttribute
```

Warning

On AMD devices and some Nvidia devices, these hints and controls are ignored.

4.12.3.3 hipFuncCache_t

```
typedef enum hipFuncCache_t hipFuncCache_t
```

Warning

On AMD devices and some Nvidia devices, these hints and controls are ignored.

4.12.3.4 hipSharedMemConfig

```
typedef enum hipSharedMemConfig hipSharedMemConfig
```

Warning

On AMD devices and some Nvidia devices, these hints and controls are ignored.

4.12.4 Enumeration Type Documentation

4.12.4.1 hipDeviceAttribute_t

```
enum hipDeviceAttribute_t
```

Enumerator

hipDeviceAttributeMaxThreadsPerBlock	Maximum number of threads per block.
hipDeviceAttributeMaxBlockDimX	Maximum x-dimension of a block.
hipDeviceAttributeMaxBlockDimY	Maximum y-dimension of a block.

Enumerator

hipDeviceAttributeMaxBlockDimZ	Maximum z-dimension of a block.
hipDeviceAttributeMaxGridDimX	Maximum x-dimension of a grid.
hipDeviceAttributeMaxGridDimY	Maximum y-dimension of a grid.
hipDeviceAttributeMaxGridDimZ	Maximum z-dimension of a grid.
hipDeviceAttributeMaxSharedMemoryPerBlock	Maximum shared memory available per block in bytes.
hipDeviceAttributeTotalConstantMemory	Constant memory size in bytes.
hipDeviceAttributeWarpSize	Warp size in threads.
hipDeviceAttributeMaxRegistersPerBlock	Maximum number of 32-bit registers available to a thread block. This number is shared by all thread blocks simultaneously resident on a multiprocessor.
hipDeviceAttributeClockRate	Peak clock frequency in kilohertz.
hipDeviceAttributeMemoryClockRate	Peak memory clock frequency in kilohertz.
hipDeviceAttributeMemoryBusWidth	Global memory bus width in bits.
hipDeviceAttributeMultiprocessorCount	Number of multiprocessors on the device.
hipDeviceAttributeComputeMode	Compute mode that device is currently in.
hipDeviceAttributeL2CacheSize	Size of L2 cache in bytes. 0 if the device doesn't have L2 cache.
hipDeviceAttributeMaxThreadsPerMultiProcessor	Maximum resident threads per multiprocessor.
hipDeviceAttributeComputeCapabilityMajor	Major compute capability version number.
hipDeviceAttributeComputeCapabilityMinor	Minor compute capability version number.
hipDeviceAttributeConcurrentKernels	Device can possibly execute multiple kernels concurrently.
hipDeviceAttributePciBusId	PCI Bus ID.
hipDeviceAttributePciDeviceId	PCI Device ID.
hipDeviceAttributeMaxSharedMemoryPer↩ Multiprocessor	Maximum Shared Memory Per Multiprocessor.
hipDeviceAttributeIsMultiGpuBoard	Multiple GPU devices.
hipDeviceAttributeIntegrated	iGPU
hipDeviceAttributeCooperativeLaunch	Support cooperative launch.
hipDeviceAttributeCooperativeMultiDeviceLaunch	Support cooperative launch on multiple devices.
hipDeviceAttributeMaxTexture1DWidth	Maximum number of elements in 1D images.
hipDeviceAttributeMaxTexture2DWidth	Maximum dimension width of 2D images in image elements.
hipDeviceAttributeMaxTexture2DHeight	Maximum dimension height of 2D images in image elements.
hipDeviceAttributeMaxTexture3DWidth	Maximum dimension width of 3D images in image elements.
hipDeviceAttributeMaxTexture3DHeight	Maximum dimensions height of 3D images in image elements.
hipDeviceAttributeMaxTexture3DDepth	Maximum dimensions depth of 3D images in image elements.
hipDeviceAttributeHdpMemFlushCntl	Address of the HDP_MEM_COHERENCY_FLUSH_CNTL register.
hipDeviceAttributeHdpRegFlushCntl	Address of the HDP_REG_COHERENCY_FLUSH_CNTL register.
hipDeviceAttributeMaxPitch	Maximum pitch in bytes allowed by memory copies.
hipDeviceAttributeTextureAlignment	Alignment requirement for textures.
hipDeviceAttributeTexturePitchAlignment	Pitch alignment requirement for 2D texture references bound to pitched memory;.

Enumerator

hipDeviceAttributeKernelExecTimeout	Run time limit for kernels executed on the device.
hipDeviceAttributeCanMapHostMemory	Device can map host memory into device address space.
hipDeviceAttributeEccEnabled	Device has ECC support enabled.
hipDeviceAttributeCooperativeMultiDevice↩ UnmatchedFunc	Supports cooperative launch on multiple devices with unmatched functions
hipDeviceAttributeCooperativeMultiDevice↩ UnmatchedGridDim	Supports cooperative launch on multiple devices with unmatched grid dimensions
hipDeviceAttributeCooperativeMultiDevice↩ UnmatchedBlockDim	Supports cooperative launch on multiple devices with unmatched block dimensions
hipDeviceAttributeCooperativeMultiDevice↩ UnmatchedSharedMem	Supports cooperative launch on multiple devices with unmatched shared memories
hipDeviceAttributeAsicRevision	Revision of the GPU in this device.
hipDeviceAttributeManagedMemory	Device supports allocating managed memory on this system.
hipDeviceAttributeDirectManagedMemAccessFrom↩ Host	Host can directly access managed memory on the device without migration
hipDeviceAttributeConcurrentManagedAccess	Device can coherently access managed memory concurrently with the CPU
hipDeviceAttributePageableMemoryAccess	Device supports coherently accessing pageable memory without calling hipHostRegister on it
hipDeviceAttributePageableMemoryAccessUses↩ HostPageTables	Device accesses pageable memory via the host's page tables

4.12.4.2 hipFuncAttribute

`enum hipFuncAttribute`

Warning

On AMD devices and some Nvidia devices, these hints and controls are ignored.

4.12.4.3 hipFuncCache_t

`enum hipFuncCache_t`

Warning

On AMD devices and some Nvidia devices, these hints and controls are ignored.

Enumerator

hipFuncCachePreferNone	no preference for shared memory or L1 (default)
hipFuncCachePreferShared	prefer larger shared memory and smaller L1 cache
hipFuncCachePreferL1	prefer larger L1 cache and smaller shared memory
hipFuncCachePreferEqual	prefer equal size L1 cache and shared memory

4.12.4.4 hipMemoryAdvise

enum hipMemoryAdvise

Enumerator

hipMemAdviseSetReadMostly	Data will mostly be read and only occassionally be written to
hipMemAdviseUnsetReadMostly	Undo the effect of hipMemAdviseSetReadMostly.
hipMemAdviseSetPreferredLocation	Set the preferred location for the data as the specified device
hipMemAdviseUnsetPreferredLocation	Clear the preferred location for the data.
hipMemAdviseSetAccessedBy	Data will be accessed by the specified device, so prevent page faults as much as possible
hipMemAdviseUnsetAccessedBy	Let the Unified Memory subsystem decide on the page faulting policy for the specified device

4.12.4.5 hipMemRangeAttribute

enum hipMemRangeAttribute

Enumerator

hipMemRangeAttributeReadMostly	Whether the range will mostly be read and only occassionally be written to
hipMemRangeAttributePreferredLocation	The preferred location of the range.
hipMemRangeAttributeAccessedBy	Memory range has cudaMemAdviseSetAccessedBy set for specified device
hipMemRangeAttributeLastPrefetchLocation	The last location to which the range was prefetched.

4.12.4.6 hipSharedMemConfig

enum hipSharedMemConfig

Warning

On AMD devices and some Nvidia devices, these hints and controls are ignored.

Enumerator

hipSharedMemBankSizeDefault	The compiler selects a device-specific value for the banking.
hipSharedMemBankSizeFourByte	Shared mem is banked at 4-bytes intervals and performs best when adjacent threads access data 4 bytes apart.
hipSharedMemBankSizeEightByte	Shared mem is banked at 8-byte intervals and performs best when adjacent threads access data 4 bytes apart.

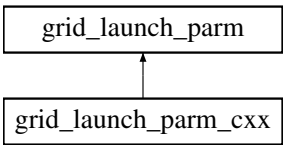
5.53 grid_launch_parm Struct Reference

Inheritance diagram for grid_launch_parm:



Public Attributes

- gl_dim3 grid_dim

  Grid dimensions.
- gl_dim3 group_dim

  Group dimensions.
- unsigned int dynamic_group_mem_bytes
- enum gl_barrier_bit barrier_bit
- unsigned int launch_fence
- hc::accelerator_view * av
- hc::completion_future * cf

5.53.1 Member Data Documentation

5.53.1.1 av

`hc::accelerator_view* grid_launch_parm::av`

Pointer to the accelerator_view where the kernel should execute. If NULL, the default view on the default accelerator is used.

5.53.1.2 barrier_bit

`enum gl_barrier_bit grid_launch_parm::barrier_bit`

Control setting of barrier bit on per-packet basis: See gl_barrier_bit description.
Placeholder, is not used to control packet dispatch yet

5.53.1.3 cf

`hc::completion_future* grid_launch_parm::cf`
Pointer to the completion_future used to track the status of the command. If NULL, the command does not write status. In this case, synchronization can be enforced with queue-level waits or waiting on younger commands.

5.53.1.4 dynamic_group_mem_bytes

`unsigned int grid_launch_parm::dynamic_group_mem_bytes`
Amount of dynamic group memory to use with the kernel launch. This memory is in addition to the amount used statically in the kernel.

5.53.1.5 launch_fence

`unsigned int grid_launch_parm::launch_fence`
Value of packet fences to apply to launch. The correspond to the value of bits 9:14 in the AQL packet, see HSA_↩ PACKET_HEADER_ACQUIRE_FENCE_SCOPE and hsa_fence_scope_t.

5.54 grid_launch_parm_cxx Class Reference

  } **reserved**
  } **res**
- unsigned int flags

5.60.1 Member Data Documentation

5.60.1.1 devPtr

`hipDeviceptr_t HIP_RESOURCE_DESC_st::devPtr`
Device pointer

5.60.1.2 flags

`unsigned int HIP_RESOURCE_DESC_st::flags`
Flags (must be zero)

5.60.1.3 format

`hipArray_Format HIP_RESOURCE_DESC_st::format`
Array format

5.60.1.4 hArray

`hipArray_t HIP_RESOURCE_DESC_st::hArray`
HIP array

5.60.1.5 height

`size_t HIP_RESOURCE_DESC_st::height`
Height of the array in elements

5.60.1.6 hMipmappedArray

`hipMipmappedArray_t HIP_RESOURCE_DESC_st::hMipmappedArray`
HIP mipmapped array

5.60.1.7 numChannels

`unsigned int HIP_RESOURCE_DESC_st::numChannels`
Channels per array element

5.60.1.8 pitchInBytes

`size_t HIP_RESOURCE_DESC_st::pitchInBytes`
Pitch between two rows in bytes

5.60.1.9 resType

`HIPresourcetype HIP_RESOURCE_DESC_st::resType`
Resource type

5.60.1.10 sizeInBytes

`size_t HIP_RESOURCE_DESC_st::sizeInBytes`
Size in bytes

5.60.1.11 width

`size_t HIP_RESOURCE_DESC_st::width`
Width of the array in elements

5.61 HIP_RESOURCE_VIEW_DESC_st Struct Reference

Public Attributes

- unsigned int lastLayer
- unsigned int **reserved** [16]

5.61.1 Detailed Description

Resource view descriptor

5.61.2 Member Data Documentation

5.61.2.1 depth

`size_t HIP_RESOURCE_VIEW_DESC_st::depth`
Depth of the resource view

5.61.2.2 firstLayer

`unsigned int HIP_RESOURCE_VIEW_DESC_st::firstLayer`
First layer index

5.61.2.3 firstMipmapLevel

`unsigned int HIP_RESOURCE_VIEW_DESC_st::firstMipmapLevel`
First defined mipmap level

5.61.2.4 format

`HIPresourceViewFormat HIP_RESOURCE_VIEW_DESC_st::format`
Resource view format

5.61.2.5 height

`size_t HIP_RESOURCE_VIEW_DESC_st::height`
Height of the resource view

5.61.2.6 lastLayer

`unsigned int HIP_RESOURCE_VIEW_DESC_st::lastLayer`
Last layer index

5.61.2.7 lastMipmapLevel

`unsigned int HIP_RESOURCE_VIEW_DESC_st::lastMipmapLevel`
Last defined mipmap level

5.61.2.8 width

`size_t HIP_RESOURCE_VIEW_DESC_st::width`
Width of the resource view

5.62 HIP_TEXTURE_DESC_st Struct Reference

Public Attributes

- HIPaddress_mode addressMode [3]
- HIPfilter_mode filterMode
- unsigned int flags
- unsigned int maxAnisotropy
- HIPfilter_mode mipmapFilterMode
- float mipmapLevelBias
- float minMipmapLevelClamp
- float maxMipmapLevelClamp
- float borderColor [4]
- int **reserved** [12]

5.62.1 Detailed Description

Texture descriptor

5.62.2 Member Data Documentation

5.62.2.1 addressMode

`HIPaddress_mode HIP_TEXTURE_DESC_st::addressMode[3]`
Address modes

5.62.2.2 borderColor

`float HIP_TEXTURE_DESC_st::borderColor[4]`
Border Color

5.62.2.3 filterMode

`HIPfilter_mode HIP_TEXTURE_DESC_st::filterMode`
Filter mode

5.62.2.4 flags

`unsigned int HIP_TEXTURE_DESC_st::flags`
Flags

5.62.2.5 maxAnisotropy

`unsigned int HIP_TEXTURE_DESC_st::maxAnisotropy`
Maximum anisotropy ratio

5.62.2.6 maxMipmapLevelClamp

`float HIP_TEXTURE_DESC_st::maxMipmapLevelClamp`
Mipmap maximum level clamp

5.62.2.7 minMipmapLevelClamp

`float HIP_TEXTURE_DESC_st::minMipmapLevelClamp`
Mipmap minimum level clamp

5.62.2.8 mipmapFilterMode

`HIPfilter_mode HIP_TEXTURE_DESC_st::mipmapFilterMode`
Mipmap filter mode

5.62.2.9 mipmapLevelBias

`float HIP_TEXTURE_DESC_st::mipmapLevelBias`
Mipmap level bias

5.63 hipArray Struct Reference

- enum hipArray_Format **Format**
- unsigned int **NumChannels**
- bool **isDrv**
- unsigned int **textureType**

5.64 hipChannelFormatDesc Struct Reference

Public Attributes

- int **x**
- int **y**
- int **z**
- int **w**
- enum hipChannelFormatKind **f**

5.65 hipDeviceArch_t Struct Reference

Public Attributes

- unsigned hasGlobalInt32Atomics: 1

  32-bit integer atomics for global memory.
- unsigned hasGlobalFloatAtomicExch: 1

  32-bit float atomic exch for global memory.
- unsigned hasSharedInt32Atomics: 1

  32-bit integer atomics for shared memory.
- unsigned hasSharedFloatAtomicExch: 1

  32-bit float atomic exch for shared memory.
- unsigned hasFloatAtomicAdd: 1

  32-bit float atomic add in global and shared memory.
- unsigned hasGlobalInt64Atomics: 1

  64-bit integer atomics for global memory.
- unsigned hasSharedInt64Atomics: 1

  64-bit integer atomics for shared memory.
- unsigned hasDoubles: 1

  Double-precision floating point.
- unsigned hasWarpVote: 1

  Warp vote instructions (__any, __all).
- unsigned hasWarpBallot: 1

  Warp ballot instructions (__ballot).
- unsigned hasWarpShuffle: 1

  Warp shuffle operations. (__shfl_∗).
- unsigned hasFunnelShift: 1

  Funnel two words into one with shift&mask caps.
- unsigned hasThreadFenceSystem: 1

  __threadfence_system.
- unsigned hasSyncThreadsExt: 1

  __syncthreads_count, syncthreads_and, syncthreads_or.
- unsigned hasSurfaceFuncs: 1

Surface functions.

- unsigned has3dGrid: 1

  Grid and group dims are 3D (rather than 2D).
- unsigned hasDynamicParallelism: 1

  Dynamic parallelism.

5.66 hipDeviceProp_t Struct Reference

Public Attributes

- char name [256]

  Device name.
- size_t totalGlobalMem

  Size of global memory region (in bytes).
- size_t sharedMemPerBlock

  Size of shared memory region (in bytes).
- int regsPerBlock

  Registers per block.
- int warpSize

  Warp size.
- int maxThreadsPerBlock

  Max work items per work group or workgroup max size.
- int maxThreadsDim [3]

  Max number of threads in each dimension (XYZ) of a block.
- int maxGridSize [3]

  Max grid dimensions (XYZ).
- int clockRate

  Max clock frequency of the multiProcessors in khz.
- int memoryClockRate

  Max global memory clock frequency in khz.
- int memoryBusWidth

  Global memory bus width in bits.
- size_t totalConstMem

  Size of shared memory region (in bytes).
- int major
- int minor
- int multiProcessorCount

  Number of multi-processors (compute units).
- int l2CacheSize

  L2 cache size.
- int maxThreadsPerMultiProcessor

  Maximum resident threads per multi-processor.
- int computeMode

  Compute mode.
- int clockInstructionRate
- hipDeviceArch_t arch

  Architectural feature flags. New for HIP.
- int concurrentKernels

  Device can possibly execute multiple kernels concurrently.
- int pciDomainID

  PCI Domain ID.

- int pciBusID

  PCI Bus ID.
- int pciDeviceID

  PCI Device ID.
- size_t maxSharedMemoryPerMultiProcessor

  Maximum Shared Memory Per Multiprocessor.
- int isMultiGpuBoard

  1 if device is on a multi-GPU board, 0 if not.
- int canMapHostMemory

  Check whether HIP can map host memory.
- int gcnArch

  AMD GCN Arch Value. Eg: 803, 701.
- char gcnArchName [256]

  AMD GCN Arch Name.
- int integrated

  APU vs dGPU.
- int cooperativeLaunch

  HIP device supports cooperative launch.
- int cooperativeMultiDeviceLaunch

  HIP device supports cooperative launch on multiple devices.
- int maxTexture1D

  Maximum number of elements in 1D images.
- int maxTexture2D [2]

  Maximum dimensions (width, height) of 2D images, in image elements.
- int maxTexture3D [3]

  Maximum dimensions (width, height, depth) of 3D images, in image elements.
- unsigned int * hdpMemFlushCntl

  Addres of HDP_MEM_COHERENCY_FLUSH_CNTL register.
- unsigned int * hdpRegFlushCntl

  Addres of HDP_REG_COHERENCY_FLUSH_CNTL register.
- size_t memPitch

  Maximum pitch in bytes allowed by memory copies.
- size_t textureAlignment

  Alignment requirement for textures.
- size_t texturePitchAlignment

  Pitch alignment requirement for texture references bound to pitched memory.
- int kernelExecTimeoutEnabled

  Run time limit for kernels executed on the device.
- int ECCEnabled

  Device has ECC support enabled.
- int tccDriver

  1:If device is Tesla device using TCC driver, else 0
- int cooperativeMultiDeviceUnmatchedFunc
- int cooperativeMultiDeviceUnmatchedGridDim
- int cooperativeMultiDeviceUnmatchedBlockDim
- int cooperativeMultiDeviceUnmatchedSharedMem
- int isLargeBar

  1: if it is a large PCI bar device, else 0
- int asicRevision

  Revision of the GPU in this device.
- int managedMemory

Device supports allocating managed memory on this system.

- int directManagedMemAccessFromHost

  Host can directly access managed memory on the device without migration.

- int concurrentManagedAccess

  Device can coherently access managed memory concurrently with the CPU.

- int pageableMemoryAccess
- int pageableMemoryAccessUsesHostPageTables

  Device accesses pageable memory via the host's page tables.

5.66.1 Detailed Description

hipDeviceProp

5.66.2 Member Data Documentation

5.66.2.1 clockInstructionRate

`int hipDeviceProp_t::clockInstructionRate`

Frequency in khz of the timer used by the device-side "clock∗" instructions. New for HIP.

5.66.2.2 cooperativeMultiDeviceUnmatchedBlockDim

`int hipDeviceProp_t::cooperativeMultiDeviceUnmatchedBlockDim`

HIP device supports cooperative launch on multiple devices with unmatched block dimensions

5.66.2.3 cooperativeMultiDeviceUnmatchedFunc

`int hipDeviceProp_t::cooperativeMultiDeviceUnmatchedFunc`

HIP device supports cooperative launch on multiple devices with unmatched functions

5.66.2.4 cooperativeMultiDeviceUnmatchedGridDim

`int hipDeviceProp_t::cooperativeMultiDeviceUnmatchedGridDim`

HIP device supports cooperative launch on multiple devices with unmatched grid dimensions

5.66.2.5 cooperativeMultiDeviceUnmatchedSharedMem

`int hipDeviceProp_t::cooperativeMultiDeviceUnmatchedSharedMem`

HIP device supports cooperative launch on multiple devices with unmatched shared memories

5.66.2.6 major

`int hipDeviceProp_t::major`

Major compute capability. On HCC, this is an approximation and features may differ from CUDA CC. See the arch feature flags for portable ways to query feature caps.

5.66.2.7 minor

`int hipDeviceProp_t::minor`

Minor compute capability. On HCC, this is an approximation and features may differ from CUDA CC. See the arch feature flags for portable ways to query feature caps.

5.66.2.8 pageableMemoryAccess

`int hipDeviceProp_t::pageableMemoryAccess`

Device supports coherently accessing pageable memory without calling hipHostRegister on it
